14
15 P R O C E E D I N G S

16 COURT SECURITY OFFICER: All rise.

17 (Jury in.)

18 THE COURT: Please be seated.

19 MR. HARDIN: May it please the Court.

20 THE COURT: Is everyone comfortable with
21 what the temperature is?

22 Let us know if you're not. Thank you.

23 Go ahead.

24 THOMAS J. SHAW, PLAINTIFF'S WITNESS, SWORN

25 DIRECT EXAMINATION CONTINUED

1 BY MR. HARDIN:

2 Q. Mr. Shaw?

3 A. Yes, sir.

4 Q. We learned about your trip to Germany and your
5 filing of the patent that became the '733 patent in this
6 case, just before lunch.

7 Now, before we move on to the story of -- of
8 the other patents in this case, I want to ask you some
9 questions about your understanding of how you accepted
10 funding from the SBIR grants that affects the products
11 that your company makes and the patents you own.

12 Do you understand that?

13 A. Yes, sir.

14 Q. Okay. Now, the first grant, that first grant
15 period that -- that you received money from, from the
16 government, was from May of 1992 to December of 1992.
17 What did you accomplish with the money that the SBIR
18 grant from the National Institute of Health gave you?

19 A. I took the initial design I had and the one
20 that I was injected with and reduced it down to the 3cc
21 size.

22 Q. Okay. And that was the design where the
23 needle is drawn up into the syringe body using a spring
24 or elastomer in the back?

25 A. Yes, sir.

1 Q. Is that the syringe type that the larger size
2 was used in Bonham, Texas, that we saw, giving a much
3 younger you an injection on the film?

4 A. Hey. Yes.

5 Q. Now, was it -- is it -- was it your
6 understanding that the government had -- has rights in
7 any -- in that early product?

8 A. Yes. They -- they have what's called march-in
9 rights. And under the SBIR program -- and, again, he's
10 asking me my understanding -- march-in rights are that
11 if I take a grant and reduce something to practice, and
12 then I don't manufacture it and I don't license anybody
13 else to manufacture it, the government would have the
14 right to have somebody else manufacture it, because they
15 invested in it with the idea that it was going to get
16 out to the public.

17 Q. Okay. Now, after that first grant period
18 ended and before the second period, there was a gap; am
19 I correct? There was a gap between -- your money ended.

20 A. Right.

21 Q. And then there was a gap of some months before
22 the second grant period started.

23 A. That's correct.

24 Q. Okay. Now, did you make any important
25 discoveries in that period, in that gap period?

1 A. It was -- it was that period that I was
2 working on the write-up that I wasn't funded, that I
3 came up with the retainer method with -- well, I guess
4 building on the reference -- and so that -- that was
5 that discovery period.

6 Q. Now, you then got a pretty substantial
7 grant -- you called it a Phase 2 grant -- to try to
8 bring these things up to manufacturable condition,
9 correct?

10 A. Yeah. It was \$600,000.

11 Q. Okay. And what did you use those funds for?

12 A. I took that money and took that new concept
13 and re -- and reduced it to practice and started making
14 syringes that became the Pop-N-Lok and, ultimately, the
15 VanishPoint and the family of patents that we're
16 currently using.

17 Q. Okay. And what is your understanding -- are
18 these -- these patents all refer to a government right
19 in the patents themselves, correct?

20 A. Right.

21 Q. And what's your understanding of that right?

22 A. My understanding of that is, again, because it
23 was reduced to practice, they have march-in rights. And
24 that means if I don't make the product and I don't
25 license the product, then the government would have the

1 right to come in and have somebody else make the
2 product.

3 And my understanding is that those rights
4 would be somewhat limited in that some of the technology
5 was developed during unfunded periods. And I -- and I
6 paid for the patents myself, but they should have
7 rights, if I'm not making the technology, and I believe
8 they do have some limited march-in right.

9 But as long as we're making the product, it's
10 my understanding that they don't -- they don't have
11 march-in rights unless we're not -- if we're marching --
12 they don't march, I guess is the easiest way to think
13 about it.

14 Q. Okay. Now, let's take -- take you back now.
15 We had left you at -- you were in Germany, but you were
16 coming back to the plant. You had been -- where had you
17 been operating out of before you went to the facility in
18 Little Elm, which you spoke of earlier this morning?

19 A. Originally, under the -- when we first
20 started, it was in Lewisville, that storefront where --
21 when Kathryn was talking about she first came to work,
22 we were in a little storefront down there on 622 South
23 Mill in Lewisville.

24 Q. And that was that little storefront picture?

25 MR. HARDIN: Do we have a picture of

1 that, 425 (sic) South Mill?

2 Q. (By Mr. Hardin) Now, in that facility, did you
3 actually make -- is that the facility you were operating
4 out of?

5 A. Well, there were actually three bays of that
6 little facility right across from the grade school. And
7 in the third one, we had a clean room, and in the other
8 rooms, we were doing design. And it was in those
9 buildings, yes.

10 Q. Okay. And you -- you mentioned at that
11 time -- so you had a clean room so you could make
12 sterile product --

13 A. Correct.

14 Q. -- for testing.

15 And you talked about product that you were
16 making -- I backed up. This is before you put a collar
17 on the back. You told them you made something called a
18 Pop-N-Lok?

19 A. Right.

20 Q. Is this an early example of that design?

21 A. After Clarence made the jig and came back and
22 told me it would work, then we immediately turned around
23 and made that, which actually demonstrated the first
24 donut on a needle-holder with the spring in front.

25 So that's when I cut the rod off, and we made

1 that one.

2 Q. Okay. And the products that you were making
3 in this -- in this timeframe, were you offering those
4 products for sale?

5 A. No, we were not.

6 Q. Why not?

7 A. Well, we didn't have permission to market from
8 the FDA, and it is an FDA-regulated product, and
9 actually, we weren't ready to sell. And so everything
10 we did either clinically or otherwise was under a
11 written, signed agreement that we knew the person using
12 it understood what the -- what level of sterility and
13 what they were dealing with, because you never know what
14 somebody might do with a syringe if they're laying
15 around.

16 Q. Okay. What was the reaction that you were
17 getting from putting the product out there, the initial
18 products?

19 A. Well, I mentioned earlier with that safe --
20 with the Pop-N-Lok syringe, when we went out there to
21 the facilities, they were really excited. And it was
22 kind of a wow factor, and they were anxious for us to
23 hurry up and get them to production so they could start
24 using them and not having to deal with the sticks.

25 Q. Now, in 1996, there's been mention of a

1 company called Saf-T-Med. In 1996, were you even aware
2 that there was another company trying to produce a
3 retractable syringe?

4 A. No, sir.

5 Q. Now, did you -- did you send -- I'm sorry?

6 A. No.

7 Q. Did you send samples out for consideration by
8 manufacturers, this early prototype?

9 A. No, sir.

10 Q. Okay. Didn't you -- did you not send some to
11 Becton Dickinson?

12 A. Were you asking me in reference to Saf-T-Med?

13 Q. Saf-T-Med, right. You didn't -- even though
14 they were --

15 A. No, I didn't know they existed.

16 Yes, we did send syringes out both for
17 clinical, and we also sent samples to Becton Dickinson.

18 Q. Okay.

19 MR. HARDIN: Can I see PX68, please?

20 Q. (By Mr. Hardin) Is this a cover letter from
21 you forwarding some samples for them to look at?

22 A. Yes, sir.

23 Q. Now, in 1996, do you recall of some clinical
24 testing that was being done to see -- if there was
25 clinical testing being done to see if the VanishPoint

1 syringe could be used for accessing veins and arteries?

2 A. Well, yes. That was going on, and the way
3 that came about is we were getting ready -- we were
4 hoping to be in full production in '97, and then we had
5 to finish up our labeling with the FDA permission to
6 market.

7 And the question came up -- we had proved the
8 syringes worked for injections, but they had never been
9 used in veins or arteries. And the question was, would
10 that retraction damage the vein or the artery.

11 And since we were the first people to make
12 retractable syringes, the FDA -- we needed to submit a
13 study on that before we put it on our labeling. And so
14 we went to the Dallas Presbyterian Hospital, and we
15 conducted a clinical there.

16 Q. And what were the results of those clinical
17 tests in 1996?

18 A. It was uniformly liked, and they were anxious
19 to get the product, and it was well-received. And it
20 didn't create any problems. And so we did get
21 permission to market it for that and also for the other
22 uses.

23 Q. Now, these clinicals were in approximately
24 September of 1996?

25 A. Yes, sir.

1 Q. And was there a Dr. Goodman involved with
2 those clinicals?

3 A. Yes, sir. He was the head of Infection
4 Control.

5 Q. And did he at some point, shortly after those
6 clinicals a few months later, urge that Presbyterian
7 Hospital get your product into the hands of nurses and
8 healthcare workers?

9 A. They had had 126 accidental sticks that
10 previous year before we went there. And as Infection
11 Control, he was -- expressed concern and wrote a letter
12 stating that he felt the product, I think, was a medical
13 necessity or something along those lines.

14 Q. Okay.

15 MR. HARDIN: Can I see Plaintiff's
16 Exhibit 427?

17 Q. (By Mr. Hardin) Dr. Goodman's position --
18 while we're waiting for the document, Dr. Goodman's
19 position with Presbyterian Hospital was what?

20 A. He was a doctor, but he was also head of
21 Infection Control.

22 Q. Okay.

23 MR. HARDIN: Looks like we have a
24 technical problem. We'll come back to that.

25 Q. (By Mr. Hardin) About this time when the

1 product was being tested for use in veins, first of all,
2 was the product recommended for use in veins?

3 A. Yes, it was. It was fine.

4 Q. And so -- and so when it was being used in
5 veins, did a new problem come to your attention?

6 A. Well, what actually happened is we were
7 finishing the labeling, and it came to my attention that
8 also syringes were occasionally -- not very frequently,
9 but sometimes when you had a small child, they would use
10 a syringe needle because it was a smaller gauge, to
11 draw -- to draw blood from a child, for example, when
12 they had a small vein.

13 And so the question was asked: What's going
14 to happen if they take -- if the hospital isn't using
15 anything but retractable syringes, and they need to draw
16 blood, what's going to happen when they draw blood and
17 now you got a whole retractable syringe full of blood,
18 okay?

19 So to find out whether we were going to have
20 some kind of a labeling restriction, I asked Judy, who
21 was one of our engineers, to go downstairs and simulate
22 what that would be, how that would work.

23 And so she took red fluid and drew it up. And
24 then she took it over to a vacuum tube and stuck it down
25 in there and pushed the red fluid in there. And then it

1 was supposed to retract, but that rubber seal that I
2 told you would never let go of the steel needle, well,
3 it didn't.

4 Q. Can you -- I think we have a blood tube up
5 there so the jurors can better understand the problem
6 that you were trying to describe.

7 A. I don't have any red fluid so that will be --
8 you will have to imagine with me.

9 Okay. So the person's drawing up the fluid.
10 And then after they're done, they go over -- and, again,
11 you wouldn't recommend this because they have to carry a
12 contaminated needle or have the blood tube right there.

13 But then they would put that down in the tube
14 and then -- let's see. I forgot to draw up the red
15 fluid. Now you know why I'm not the clinician.

16 But anyway, when it gets down here and you
17 retract it, it doesn't let go of that needle, and then
18 it snapped back. And when it snapped back, she came
19 back and reported, well, there's no problem; they can
20 use it to draw blood.

21 But she said it left these little teeny size
22 of the head of a pin, just little teeny red dots. And
23 it didn't show up much, because you had the red dot on
24 top of the -- on the red tube, but you could see that
25 little bit of splatter.

1 Q. Now, were you concerned about that?

2 A. Well, yes, because we wanted our syringe to be
3 suitable for every purpose.

4 And so I told her to go back downstairs and
5 try that again. Maybe something went wrong. And she
6 came back and said, no, she did about ten of them.
7 Everytime, there's just little bitty drops of splatter
8 that were being left on this.

9 If that needle was held back until it -- until
10 it popped loose like that, I guess it caused it to
11 accelerate and jerk out of there.

12 Q. Okay. Hold that up for a minute. Here's the
13 letter we were trying to find. This is the letter from
14 Dr. Goodman?

15 A. Yes, sir.

16 Q. So he's actually referring to tests that had
17 happened the prior fall?

18 A. Yes.

19 Q. Okay. I'm writing this letter as the Medical
20 Director of Infection Control at Presbyterian Hospital
21 of Dallas to urge you to purchase the VanishPoint
22 syringe for use in our hospital.

23 This is an issue that demands your immediate
24 attention. I have reviewed the clinical studies,
25 including those done at Presbyterian Hospital at Dallas,

1 have used the device myself, and have reviewed the cost
2 savings associated with its use.

3 The automatic retraction of needle directly
4 from the patient eliminates opportunities for accidental
5 needlesticks far more effectively than any other
6 available, quote, safety syringe, unquote.

7 So this was -- was -- Presbyterian Hospital,
8 did you consider it to be a great candidate for a
9 possible sale?

10 A. Yes, sir, because when we were over there and
11 we did all these clinicals, a lot of the doctors became
12 shareholders because they were excited about the
13 technology. So now we had the head of Infection
14 Control, numerous doctors, and we had also been in a
15 successful clinical.

16 So I felt like, yes, it was very important,
17 and it was going to be our first big customer when we
18 started.

19 Q. Okay. I had to interrupt your story, though,
20 about the venting, so I apologize. I thought that was
21 important enough to let the jury see.

22 But now, you were telling them about this
23 problem with little, small drops. Are those sometimes
24 called splatter?

25 A. Yes.

1 Q. Okay. And you had noticed that that could
2 occur with your VanishPoint syringe when it's used in
3 this manner in the tube?

4 A. Yes.

5 Q. And what did you do next?

6 A. Well, just -- just so we don't get the
7 timeline wrong, we're now moving toward production.

8 Q. Okay.

9 A. And so we already had syringes that were out
10 there, and they were retracting just fine. And we
11 weren't having a problem with that, but to address the
12 problem of splatter, I suggested that Judy and Gary, our
13 toolmaker, go down and see if by putting a vent in there
14 so that the -- at the end of the injection, a puff of
15 air wouldn't come out the front, because I thought,
16 well, maybe when it retracts, the air -- it's retracting
17 fine, but maybe the air is coming out not -- not from
18 the back. It's coming out from the front. And that air
19 is blowing the fluid that's left in the needle out and
20 causing those little droplets.

21 And so they -- they went ahead and vented it.

22 Q. Okay. And did -- that idea of using those
23 vents in combination with your tucking handle, did
24 that -- did you file a patent application on that?

25 A. Yes, I did.

1 Q. And did that become the '077 patent?

2 A. Yes.

3 Q. Now, at the time --

4 MR. HARDIN: Do we have PX4, the '007
5 patent, and in particular Figure 12?

6 There we go.

7 Q. (By Mr. Hardin) So this is a picture from the
8 patent -- the '077 patent?

9 A. Yes.

10 Q. We colored in some places in yellow in this
11 engineering drawing.

12 Can you explain to the jury what they're
13 seeing?

14 A. Yes. Those are the vents that are at the back
15 of the plunger handle that are venting the inside of the
16 plunger handle. And we moved them off to the sides so
17 that if there was any liquid up in the handle, it
18 couldn't come up and get on the thumb of the person
19 using it.

20 But we were putting that vent in so that that
21 spray wouldn't come out the front.

22 Q. Now, you did that. And did you contact your
23 lawyers in the normal course and file for a patent
24 application?

25 A. Yes, sir.

1 Q. And in connection with those proceedings, did
2 you find out that there were inventors prior to you that
3 had filed patented -- for patented designs of
4 retractable syringes that had a hole in the plunger
5 handle?

6 A. Yes, sir. I was sent a Murray patent, and it
7 had a vent in the back prior to -- prior to what I had
8 come up with.

9 MR. HARDIN: And can we see PX37, please?
10 Oh, well -- oh, that's fine. Okay.

11 Q. (By Mr. Hardin) So this is a copy of the
12 Murray patent that was before your patent, correct?

13 A. Yes.

14 Q. And it has some holes in the plunger handle,
15 correct?

16 A. Yes, sir.

17 Q. Okay. What did you understand the Murray
18 patent purpose for those holes was?

19 A. Well, you could have seen it before he cut off
20 the picture, if he puts back on the full size.

21 When that needle-holder releases, this has --
22 it's a different design. But when it releases, there's
23 a piston inside that handle that that spring pulls up.
24 And because that piston is against the wall, it causes
25 compression and -- and after that air begins to

1 compress, it won't let it fully retract.

2 So they had to put that vent in there to let
3 that air out in order to let that piston move the full
4 stroke up there to get a full retraction. So they were
5 using that vent in order to facilitate the mechanical
6 part of their device for retraction.

7 And what I was doing is my syringe, and you
8 can try this -- you can plug up those vents. It will
9 still retract just fine. What I was trying to disclose
10 to the public was that I had discovered venting has
11 another function, and that is you can use vents to stop
12 splatter from coming out the front, which is totally
13 separate from releasing -- from being there in order to
14 make the product mechanically work.

15 Q. Okay. And you said that in your patent,
16 didn't you, though? In the '077 patent?

17 A. Yes, sir.

18 MR. HARDIN: Okay. Can we go back? We
19 skipped a slide. Can I go back one to that statement in
20 the patent?

21 Q. (By Mr. Hardin) Okay. The back of the
22 plunger -- this is from your '077 patent, correct?

23 A. Correct.

24 Q. Says the back of the plunger is vented, so the
25 entry of retractable parts, which upon retraction,

1 finished dislodging the stopper and carrying it back up
2 into the cavity, do not generate an internal pressure
3 that can blow out the nose of the syringe carrying any
4 residual fluid with it.

5 That was your idea?

6 A. Yes.

7 Q. As far as you know -- as far as you know, were
8 you the first to discover that idea?

9 A. I -- I have not seen that in any other patent.

10 Q. Okay. Now, the claims here at issue cover
11 more than just vents. They cover a combination of vent
12 and tucking. We've been referring to as tucking,
13 correct?

14 A. Correct.

15 Q. And that tuck has to do with, again, a handle
16 that has two positions; is that correct?

17 A. That's correct.

18 Q. And did you understand at some point in the
19 process that other people had non-retractable syringes
20 where the back tucked into a collar?

21 A. I don't know that they were ever on the
22 market, but there was -- there was a patent out there
23 that I had seen where on a standard syringe the handle
24 could tuck all the way inside.

25 Q. Okay. So explain to the jury why you felt

1 your use of a handle that would push down inside a
2 collar was any different than anyone had used that
3 before you?

4 A. On the -- on the -- on the other drawing that
5 I saw, what happened was is that the handle was just
6 shorter than the -- than the barrel. So that when you
7 pushed it in, the whole handle fit within the barrel.
8 The handle was made and manufactured just shorter
9 than -- than -- well, I can't -- if this is your barrel
10 and you made a handle that was only this long
11 (indicates), then it would just push all the way in.
12 And that handle never really changed from that first
13 position. And what I had done is if you look on -- I
14 didn't really invent a handle that tucks. I invented a
15 handle that doesn't tuck, and then it does tuck. It did
16 two things.

17 The first time through -- if I can get one of
18 these out of here.

19 Okay. The first time through, the handle is
20 all the way forward, okay? And it's still sticking out
21 where you can grab it. And they can go back and forth
22 and draw medicine and do everything they need to do.
23 And that's the first position.

24 But after the injection is completely done,
25 then you push it in, and it moves to a second position,

1 and now it's not graspable, because it's tucked inside.

2 So it wasn't just a tucking handle. It was a
3 non-tucking, and then it became a tucking handle. It
4 had one function during the injection and another
5 function after the retraction. So it was really a
6 different mechanical solution.

7 Q. Now, when it's in that second position, is
8 that plunger handle totally inaccessible?

9 A. No. You can -- you can pry it out, or as you
10 saw me the other day on that film clip, I have a long
11 thumbnail and I can -- and I've done thousands of them.
12 I can go in here and I can -- great. The one time I go
13 to do it.

14 Well, you know I can do it. You saw me do it.
15 Okay. There. I did it. Okay. I can do that. But I
16 have -- like this nail is about a quarter inch longer
17 than that one. But you can do it with a tool. It's not
18 inaccessible.

19 But we've sold over 680 million of these, and
20 we have not had, to my knowledge, a single complaint of
21 what I was watching happen at that hospital where people
22 were just fidgeting with them and accidentally dropping
23 that needle or bringing it out to exposure.

24 So I say that it solved the problem, and
25 more -- equally importantly, it eliminated the need for

1 that lock that made it so that you couldn't -- so that
2 it would be usable by everybody.

3 Q. Okay. Was that -- of that -- we've told
4 several invention vignettes, and the last one had to do
5 with the combination of this event with this
6 two-position handle, and that became the '077 patent,
7 correct?

8 A. Yes, sir.

9 Q. Okay. Now, that -- so, essentially, all that
10 invention work was done sometime in 1997 -- by 1997?

11 A. Yes. We -- we had all of that in our products
12 in early 1997.

13 Q. Okay. Now, I want to visit with you just a
14 moment, because it was been mentioned several times in
15 this litigation about your early interaction just after
16 these inventions that you've described, with a company
17 called Saf-T-Med.

18 Did you ever see a sample of the Saf-T-Med
19 product?

20 A. Yes, sir.

21 Q. How did you receive it?

22 A. I -- I saw two samples of them, and I looked
23 at it briefly and realized that the product would never
24 work.

25 Q. Now, how could you look at a product and

1 quickly tell that the product would never work?

2 A. Well, the product that I looked at -- and I'm
3 not sure it's the same one that was provided in the
4 deposition, but the product that I looked at had a
5 rubber seal mounted on a head with these little
6 collapsible stanchions that had to be molded.

7 And they were real fine in diameter, and I
8 guess the design was, is that those stanchions are
9 supposed to hold against that 18-pound fluid pressure on
10 the way in. And then when you get in, those stanchions
11 are supposed to break with that 9-pound force.

12 And the reality of it is, if you make the
13 stanchions too weak, you never finish the injection.
14 And if you make the stanchion too strong, the thing will
15 never fire.

16 And so I knew from looking at that, you know,
17 you had a mechanical barrier and a hydraulic barrier to
18 try and make a retractable syringe. And I knew whoever
19 was doing that syringe had -- had hit the wall at least
20 for now. As long as those stanchions were in there,
21 that product would never be able to be functional.

22 Q. By the time you saw that product, had you
23 already finished all the inventive activity that we just
24 discussed?

25 A. Yes, sir.

1 Q. Okay. How did the prototype of the Saf-T-Med
2 invention come to your attention?

3 A. Well, Dr. Shiu was on our Board of Directors,
4 and he also was at Presbyterian Hospital and connected
5 us with that hospital. And we had been told we were
6 going to get a contract in January of '97, when we went
7 over to that hospital.

8 Well, this was March, and we didn't have a
9 contract. And I believe around March 25th, Dr. Shiu
10 brought me a letter that had been sent to the President
11 of Presbyterian Hospital, indicating that we would not
12 get that contract. And the reason stated in it was that
13 we were to have a bake-off competition with Saf-T-Med
14 prior to getting the contract.

15 Q. Okay. And so that concerned you, because you
16 had built a plant and had a company and were ready to go
17 to market. And now you had a competition that you
18 didn't realize; is that correct?

19 A. Well, yeah, that's part of it. But there was
20 something else that was of a concern.

21 In that letter, it indicated Saf-T-Med was --
22 was going to be selling for 12 cents. There was a chart
23 in the letter, and it said the Safety -- it had our
24 product listed at 80 cents; and then it had Saf-T-Med at
25 12 cents. And it said that Saf-T-Med -- I mean -- yeah,

1 Saf-T-Med was made at -- out of standard pieces,
2 standard components.

3 And so I had an obligation to be concerned,
4 because I had raised money, we were building a plant, we
5 were going to production. I had represented we had the
6 first retractable syringe, and now I'm looking at a
7 letter that Presbyterian Hospital is getting ready to
8 buy syringes at way less cost than us.

9 And so I'm sitting here going, well, I guess
10 we're done; it's over.

11 Q. What was the first thing you did to
12 investigate whether there was such a product?

13 A. Well, the first thing I did is I checked with
14 our staff to check with the FDA. They have a register
15 list to find out who has permission to market.

16 Q. Okay. And did they have anybody there?

17 A. Saf-T-Med did not have permission to market
18 with the FDA.

19 Q. Okay. And what did you then do next?

20 A. Well, the next thing I recall doing is I knew
21 that they didn't have permission to market, so on that
22 letter in another place they had the President of the
23 company. And since it had some information on my
24 product about dead space in the chart, I called this
25 Mr. Erbs, and I wanted to find out what was -- why the

1 product's being marketed and why it has a chart
2 comparing my product to other products.

3 Q. And what did you learn from that telephone
4 conversation?

5 A. Well, what I learned from that telephone
6 conversation is he had --

7 MR. BECK: Your Honor, I'm going to
8 object. That's hearsay.

9 THE COURT: Sustained.

10 Q. (By Mr. Hardin) Did you figure out Mr. Erbs
11 might have -- did you think Mr. Erbs could have gotten
12 your product just off the open market to test?

13 A. I know that he could not have.

14 Q. Okay. How do you know that?

15 A. Well, we weren't giving them out at that time.

16 Q. Okay. And what did you do after your
17 conversation with Mr. Erbs?

18 A. Well, I received some material from Mr. Erbs,
19 a chart showing dead space calculations that had been
20 done on our product. So clearly -- clearly, somebody
21 had a sample, because there was a comparative test.

22 But interestingly enough, my product was being
23 compared to other people's but not to Jim Erbs'.

24 Q. So your understanding was this product was for
25 sale at 12 cents.

1 And what did you do next? Were you curious to
2 get a copy of the product?

3 A. Well, now I'm -- at this stage, I'm confused,
4 because it's for sale at 12 cents, but the FDA doesn't
5 have any knowledge or they're not publishing any
6 information about it. And there's a comparison to my
7 product to other products, but there's still no evidence
8 that there's really a product.

9 So I told Lillian, who worked for our company,
10 to go over to Dr. Shiu's office and pick up a sample of
11 whatever it was they were marketing to Presbyterian
12 Hospital.

13 Q. Okay. And did she do that?

14 A. Yes, she did. She brought me two samples.

15 Q. Okay. And with the sample, did some
16 information come back with the sample?

17 A. Yes. Information came back, written
18 information that had additional statements about the
19 retractable product that were not correct.

20 Q. About your product?

21 A. Yes.

22 Q. So you were afraid your product was being --

23 MR. BECK: Judge, I'm going to object to
24 the leading nature of the question.

25 Q. (By Mr. Hardin) What did you do after you

1 received this information?

2 A. Well, okay. Now I've got information -- let
3 me -- so you understand where I'm at. I'm trying to get
4 this contract where I've got these doctors, where we've
5 done this clinical. And I have been told the only way
6 I'm going to get this contract, in that letter from --
7 that the President of the hospital got from this
8 purchasing group about Saf-T-Med is I'm going to have to
9 compete in a bake-off contest at a Becton Dickinson
10 evaluation site, and the winner will get the contract.

11 And my problem is, I'm ready to sell now, and
12 this other product doesn't even exist yet.

13 And so what I -- and then there's false
14 information. So what I did is I sent what I had to my
15 lawyer and asked -- and related the events of what was
16 going on.

17 Q. Now, did you know at the time how Ms. Salerno
18 had obtained those samples and that information?

19 A. Initially, I did not.

20 Q. Okay. And what did you find out later about
21 that?

22 A. Well, my understanding of this, and I
23 wasn't -- is -- is that my lawyer sent a letter to Jim
24 Erbs to suggest that he quit making false statements or
25 whatever.

1 And then he received a letter back, and in
2 that letter, there was an indication that Lillian had
3 misrepresented who she was, so that the samples would be
4 sent to Shiu's office so that I could obtain them.

5 Q. Okay. And did you have any idea that she was
6 doing that?

7 A. No, not prior to being told that that is what
8 happened.

9 Q. Okay. And what happened next? Did you --
10 what did you do after you found that out and the lawyers
11 had already written a letter? Did you take any further
12 action with respect to the situation?

13 A. Well, I wasn't happy with Lillian. We don't
14 do things that way. And I told her don't ever do that
15 again; it's not okay to do.

16 And then in addition to that, why -- through
17 communication with the law firm, it was suggested that
18 it might be a good idea, since this other company didn't
19 really have a product yet, to try to sort of chill this
20 thing out and have me write a letter, CEO to CEO.

21 And so I wrote a letter to Mr. Erbs, and in
22 that letter, I think I indicated that you got your
23 product in a way that -- I got your product in a way
24 that wasn't right; you got our product in a way that
25 wasn't right, whatever. There's plenty of work for

1 everybody and kind of you go your way, and I'll go my
2 way, and just try to keep the thing from moving toward
3 litigation, because the chances of getting a contract
4 when you're in litigation over something like that, I
5 mean, already the contract was pretty much gone.

6 Q. Okay.

7 MR. HARDIN: Let's look at PX79, please.

8 Q. (By Mr. Hardin) Is this that letter that you
9 wrote Mr. Erbs?

10 A. Yes, sir.

11 Q. Okay. And as a result of sending to Mr. Erbs
12 this letter, did the situation, as far as you were
13 concerned, wind down?

14 A. Yes, it did. It -- it -- it didn't come up
15 again until this -- the litigation that we're in.

16 Q. Okay. And what did you tell Presbyterian
17 Hospital about this potential bake-off? Did you -- did
18 you write them anything about that?

19 A. Yes. I wrote a letter to the -- my
20 recollection is I wrote a letter to the President of --
21 Doug Hawthorne of Presbyterian Hospital, indicating to
22 him that it didn't seem appropriate that I'd have to
23 have a contest at Becton Dickinson, my competitor, at a
24 site for a product that didn't exist yet.

25 Q. Okay.

1 MR. HARDIN: Can I see PX78, please?

2 Oops, that's not the right one. 78.

3 Well, it looks like we have trouble
4 finding Exhibit 78.

5 Q. (By Mr. Hardin) You wrote a letter to the
6 President of Presbyterian Hospital and suggested that
7 you just move forward?

8 A. I -- I -- you know, I don't have the letter in
9 front of me, but my memory is I wrote him a letter that
10 says how can we compete with a product that's years, if
11 ever, from existing.

12 And what I was hoping to do was get them to
13 relent and go, hey, we'll give you the contract. Seemed
14 to me they ought to at least give me the contract until
15 the other product showed up. I mean --

16 Q. Okay. Let's move past that and go to the --
17 the -- going into the marketplace.

18 This is late -- this is by now 1997. That
19 whole thing happened around March -- March, April, May
20 of '97, correct? That little vignette about Saf-T-Med?

21 A. Yeah, I think March 25th through the following
22 month.

23 Q. Okay. All right. Now after that, you had a
24 product and you wanted to get into the marketplace.

25 What did you do?

1 A. Well, we weren't having much luck getting --
2 getting our product into hospitals, and so we thought,
3 well, we'll go out and we'll find some other people that
4 have the same interest that we do in terms of trying to
5 protect clinicians.

6 Q. And what -- what groups responded most
7 favorably?

8 A. Well, I went -- after discussion with our
9 Board, there were insurance companies and clinical
10 workers and also some union members and the clinical
11 front-line workers and union members were the most
12 responsive.

13 Q. Okay. And what were they doing and -- that
14 you joined in with or attempted to assist that you
15 thought would be useful in getting your technology into
16 wider use?

17 A. Well, when I showed them -- there had been
18 efforts -- we weren't the first. There had been efforts
19 toward needlestick protection legislation, but the
20 technology of some of the safety products was not safer
21 than what they were already using; in some cases, it was
22 more dangerous.

23 And so when I showed them that that needle
24 could just disappear, they went, hey, you know, let's do
25 legislation kind of thing, because the technology and

1 the politics are now coming together to get this thing
2 done.

3 Q. Okay.

4 A. And so --

5 Q. Did you give speeches and start to go out and
6 try to get active in helping this legislation?

7 A. As you probably noticed I'm a little nervous
8 for that.

9 I participated in a conference out in
10 California at a bloodborne pathogen conference, and I
11 have to tell you that Kathryn over here worked really
12 hard with clinical people to promote that legislation.

13 Q. Now, did you make suggestions? Did you become
14 part of the groups that were trying to push this
15 legislation through?

16 A. Yes. What -- what I -- what I could do from
17 my side, and I wasn't alone, we had people -- we drafted
18 some what we thought would be sensible to -- for the
19 legislation.

20 And in California, they have CAL-OSHA instead
21 of just like federal OSHA. And so we provided them with
22 a kind of a foundation of what we thought that
23 legislation might -- might want to look like, our
24 suggestions to it.

25 Q. And did that eventually get passed in

1 California?

2 A. It passed in California and I believe 17 other
3 states. And eventually, it became signed into federal
4 law by President Clinton, which resulted in me having my
5 picture and my pen.

6 Q. Okay. Now, along about the same time, now
7 we're about 2000/2001.

8 Did you get to meet any other personalities,
9 besides President Clinton, in trying to get your product
10 noticed in the marketplace?

11 A. Personalities? 60 Minutes did a story with
12 12 -- you know how they do three stories on Sunday night
13 or whenever. And they did a story, and I met Mike
14 Wallace.

15 Q. Okay. So you were -- your product was
16 highlighted on --

17 MR. BECK: Judge, may we approach the
18 bench, please?

19 THE COURT: Very well.

20 Jury, if you'd like a little
21 stand-in-place break, you're welcome to take one.

22 (Bench conference.)

23 MR. BECK: Judge, I --

24 THE COURT: I don't recall anything about
25 60 Minutes, but --

1 MR. HARDIN: We're not going to show the
2 60 Minutes. That's been excluded, but just mentioning
3 it he got that notification -- that got the --

4 MR. BECK: He's already mentioned that.

5 THE COURT: I don't recall -- was that
6 subject to --

7 MR. HARDIN: It was not.

8 THE COURT: I don't recall the 60 --

9 MR. BECK: I'll go back and double-check,
10 but --

11 MR. HARDIN: No. In fairness, we
12 attempted to get -- we tried to get -- Your Honor, we
13 tried to get an edited version of 60 Minutes that took
14 out the --

15 THE COURT: This went into all of that.
16 I think that's all we need to mention.

17 MR. HARDIN: I'm just saying --

18 THE COURT: It's subject to the motion in
19 limine. I don't remember. I'm not saying absolutely
20 it's not, but --

21 MR. HARDIN: That's really the only
22 question, asking that it happened.

23 THE COURT: We sure don't need to go on
24 into it. You want to look for a closer --

25 MR. BECK: No.

1 THE COURT: David or John, do y'all
2 remember if --

3 LAW CLERK: No.

4 THE COURT: I don't recall.

5 MR. HARDIN: All it is, David, is
6 just that.

7 THE COURT: Okay. I think there -- to be
8 safe, just leave it alone.

9 Okay. Thank you.

10 (Bench conference concluded.)

11 Q. (By Mr. Hardin) Now, we are in a timeframe of
12 2000, after all these things have happened.

13 And about that period of time, were you -- did
14 you ask for an independent company called BVS to do some
15 work for you?

16 A. Yes. We were taking our company public to try
17 to raise money in 2000, and so we hired BVS to do a
18 val -- they did valuations of companies to determine how
19 much the company would be worth as a part of that
20 process.

21 Q. What was their charge? Their charge was to
22 value the company?

23 A. Well, they were supposed to come in -- I mean,
24 we have accountants and everything, but our value of
25 ourself is not the way it works. You have somebody else

1 come in, and you let them go through your books, your
2 history.

3 They took into account that legislation,
4 because now we had in 2000 this national legislation,
5 the equipment we had, our projections, and based on all
6 that, they came back and said, we believe your company
7 is worth \$337 million.

8 Q. Okay. Now, after you got -- did BVS make
9 projections regarding RTI's future sales of VanishPoint
10 when they determined that value?

11 A. Yes, they did. And they based them on what we
12 had done historically and what they foresaw going
13 forward based on our marketing strategies.

14 Q. And at the time you received them as CEO of
15 your company, did you believe those projections were
16 reasonable and realistic based on what you knew about
17 both the state and federal legislation that was just
18 being enacted and the state of the market awareness of
19 the safety issue and what these products could do?

20 A. I -- I believe that they were conservative,
21 but I certainly thought that that was the way to go, is
22 to be conservative, and I thought they were perfectly
23 okay for us to go out and represent.

24 Because I have a master's in accounting.
25 Looked like to me like they had done a good job.

1 Q. So you thought -- by conservative, you thought
2 it was on the low side of what you were actually -- what
3 you thought the evaluation should be?

4 A. Yes. I thought it was much higher, but it's
5 my company. But from accounting, certainly, it would be
6 okay to say it was that. You know, if it got higher,
7 then somebody might question it, but I didn't think
8 anybody would question it would be lower than that.

9 Q. Now, at the time that those projections were
10 received, did you believe that the projections in the
11 BVS report were reasonable and could have been made as
12 of December of 2000?

13 A. Well, I did, but it wasn't just my decision.
14 Our whole -- I have a Board of Directors. I -- you
15 know, we've been sitting here all day, and I'm a patent
16 holder and all that, but actually, RTI has exclusive
17 rights to the patent.

18 I have a Board of Directors I answer to, and
19 it's the Board of Directors that made the determination,
20 and I concurred with it, that this was a perfectly good
21 conservative appraisal of our business at that time.

22 Q. Okay. Now, we're talking about values here,
23 and I want to take you back to something I asked you
24 earlier.

25 Early in the formation of the company, is it

1 true that you and RTI entered into a license agreement
2 for the Shaw patents about June of 1995?

3 A. Yes.

4 Q. Okay. And prior to entering into that license
5 agreement, had you done any research on what royalties
6 might be paid for medical devices?

7 A. I was provided information by my attorney's
8 research that I could look up to determine what a
9 reasonable royalty rate would be.

10 Q. And what -- what facts did the industry
11 research reveal?

12 A. The industry research --

13 MR. BECK: Your Honor, may we approach
14 the bench, please?

15 THE COURT: Yes.

16 (Bench conference.)

17 MR. BECK: Your Honor, I'm going to
18 object to any testimony on reasonable royalty. They
19 dropped that. All they're arguing in their damages is
20 lump sum now. Why is this relevant to anything?

21 MR. HARDIN: Well, we're setting the
22 stage for all the economics that would have been
23 available to -- the information that would have been
24 available at the table in 2000, Your Honor.

25 I just asked him about a royalty rate

1 that was entered into in 1995. We're going to say that
2 they sat down at the table at the time of this -- what
3 did you tell me we dropped?

4 MR. BECK: The reasonable royalty. I
5 mean, the damages --

6 MR. HARDIN: Well, no, no, no. I'm
7 sorry. I'm sorry. That's not correct.

8 THE COURT: What is your damage --

9 MR. HARDIN: Our damage -- our damage
10 model, Your Honor, is that there would have been a lump
11 sum reasonable royalty payment in the year 2000. That's
12 our damage model.

13 THE COURT: And you're saying this is a
14 factor that --

15 MR. HARDIN: Yes, Your Honor. Your Honor
16 excluded one damage model, but that damage model is in.

17 MR. BECK: Your Honor, reasonable royalty
18 is not relevant to any of the Georgia-Pacific factors.
19 And they're arguing lump sum. And I understand from
20 their damage model, which they've now shrunk down to a
21 lump sum payment, that is not a relevant factor in the
22 Georgia-Pacific list of factors.

23 MR. HARDIN: The Georgia-Pacific factors
24 are -- there's ten of them, and one of them is what
25 people pay in determining a reasonable royalty that you

1 end up getting.

2 And what I'm -- what I -- the reasonable
3 royalty negotiation he had was with his company in 1995.
4 We're going to say we have to go back to 2000 and look
5 at what would have happened if he would have sat down
6 with Becton Dickinson in 2000.

7 So I think it's right in the middle of
8 what is relevant.

9 MR. BECK: Judge, he negotiated with
10 himself.

11 THE COURT: Well --

12 MR. HARDIN: That's cross-examination.

13 THE COURT: I think that's wonderful
14 grounds for cross-examination. I think there are a lot
15 of factors that come into play on these Georgia-
16 Pacific -- I'm going to allow him. That's perfect
17 cross-examination.

18 MR. BECK: Thank you, Judge.

19 (Bench conference concluded.)

20 THE COURT: You may continue.

21 Q. (By Mr. Hardin) Okay. What did the facts from
22 the industry research reveal to you about royalty rates
23 back in 1995?

24 MR. BECK: Your Honor, just for the
25 record, I'd like to object as hearsay. He's now talking

1 about documents that are not in evidence.

2 THE COURT: Overruled. I'll allow this
3 with this purpose.

4 A. When I looked at the industry, the rates
5 ranged anywhere from 5 to 30 percent.

6 And it -- and you had asked me what were the
7 factors, and my memory of it was, it was how important
8 the technology was to society, was it a minor
9 improvement or major breakthrough, and what industry was
10 it in.

11 And if it was important in the industry and it
12 was a major breakthrough, we would have the higher rate.
13 And if it was an insignificant addition or something,
14 then it would have a lower rate.

15 Q. (By Mr. Hardin) Now, you chose the -- the
16 actual license agreement between you and the company at
17 the time was 5 percent, correct?

18 A. I chose the 5 percent rate.

19 Q. Why did you do that?

20 A. Well, one day I'm Thomas Shaw, Checkmate
21 Engineering, and the next day I'm Thomas Shaw
22 Retractable CEO, and I want the company to have the best
23 chance to succeed.

24 But I'm basically -- when I start out, I'm the
25 only shareholder until I got other shareholders, and I

1 wanted the company to have the lowest rate. And then as
2 it went forward, my original objective was to arrive at
3 safety.

4 And so I wanted to have the low rate so that
5 the company could thrive and do volume so that people
6 would get safety. That had been the objective from
7 before I even had a syringe.

8 Q. Now, did the effective -- the stated rate was
9 5 percent. Was the effective rate -- end up being
10 higher than that?

11 A. Yes. At the time I made the license, I
12 thought 5 percent of gross. Well, when we got out there
13 and years later -- because by the time we got to the
14 market, I find out in the industry, there's rebates and
15 payments that go back and forth through distributors,
16 and so the effective rate, instead of being 5 percent of
17 gross ends up being 7 percent in net after our company
18 pays back the rebates. And it just turned out that way.

19 Q. Okay. Now, after that license agreement, have
20 you ever entered into another license agreement with any
21 other entity for your technology?

22 A. Yes, we have.

23 Q. What -- what company was that?

24 A. There's a company in China that wants to sell
25 syringes to people in China, and they negotiated a

1 licensing agreement with us.

2 Q. Okay. Does that license agreement state a
3 rate?

4 A. It doesn't state a rate, but I know what their
5 sales price was, planned to be around 10 cents, and I
6 know what our 2-1/2 per 1 cent -- per one size and 3-1/2
7 for another, and the average of that is at 27 percent
8 royalty rate, if you take the midpoint of what they're
9 planning to do. And so they're paying the higher rate
10 because they're not us.

11 Q. Okay. Now, in the year 2000 -- if we take the
12 year 2000 as the -- that's when you got this information
13 about the valuation of the company. If we take the year
14 2000, was the VanishPoint the only automated retractable
15 syringe safety product that was actually being sold to
16 hospitals and clinics in the United States?

17 A. That's my belief.

18 Q. Now, later were there any other companies that
19 made offerings of retractable syringes?

20 A. Yes. I recall two other companies. There was
21 NNT, I think, out of England, if I recall, or Ireland,
22 somewhere over there. And then there was an SMI.

23 Q. Okay. Now, if RTI had come to -- if BD had
24 come to RTI in the year 2000, would you, at that time,
25 with all this information, been eager to give BD a

1 license to your technology?

2 A. No, sir.

3 Q. Why not?

4 A. Well, by 2000, our product is fully developed
5 and ready to go, and now we've got mandatory legislation
6 out there, and we're kind of a one-trick horse. We've
7 got one product.

8 And so if we licensed a major competitor and
9 they have substitute products, there's no guarantee that
10 they're going to push our products and pay us a royalty
11 instead of pushing the products that compete up against
12 us.

13 Q. What -- what would -- if you had handed a --
14 if you had agreed to give BD a license in 2000, what --
15 how would that have impacted that 337-million-dollar
16 value that was placed on your company back then?

17 A. Well, I think it would have dropped
18 dramatically immediately.

19 Q. Because they would have been able to use your
20 own product in competition?

21 A. Well, when you're new in the industry, to go
22 out and get a customer, you have to have something that
23 they're not getting from their existing supplier.

24 And -- and Becton Dickinson, to their credit,
25 is a major supplier, so how -- why would these companies

1 talk to us if they can get our technology from the other
2 company?

3 So I thought it would make it very difficult
4 for us to get customers, and in the meantime, there was
5 no guarantee they were going to push our -- our
6 technology.

7 Q. If RTI was at the table with BD in 2000 and
8 had to give them a license, how would RTI have wanted to
9 be paid?

10 A. Well, the only way we could have been sure of
11 that would have been to ask of them upfront money to
12 guarantee that they're going to move the product.

13 And that goes back to the other issue. When
14 we started this thing, it wasn't about money. Once I
15 had shareholders, we needed money, but it was about
16 stopping needlesticks.

17 The only way to guarantee that they're going
18 to move the technology is to have them go ahead and pay
19 in advance so they have to sell the technology in order
20 to make up what they paid for it.

21 So I would have asked for a lump sum.

22 Q. Now, would you have insisted on the entire
23 value of all your technology being provided on a
24 one-lump-sum basis?

25 A. No. What I believe would have been reasonable

1 then would have been to get like 10 years of payment
2 upfront, and then if they did the right thing and it had
3 an upside, you would get a royalty after that. If they
4 hadn't done anything, why then you go do it yourself or
5 give it to somebody else.

6 Q. Now, we talked about what your -- and then
7 what would have happened? You would have -- at the end
8 of 10 years, you would have done what?

9 A. Well, you would look at it.

10 Q. Okay.

11 A. Are they moving product all over the world,
12 are we getting royalties, or are they selling their
13 products instead?

14 And if everything was going well, then you'd
15 go, well, great, we'll extend the license, and we'll go
16 to a royalty.

17 Q. Okay. Now, was that a vastly different
18 situation in the year 2000 -- were you in a vastly
19 different situation than you had been in the '91, '92,
20 '3, '4 time period, as far as the valuation of your
21 company and possible licensing?

22 A. Oh, absolutely.

23 Q. And in those early days when -- before you had
24 shareholders and had formed a company, did you have any
25 agent that was out there seeking to try to find a way to

1 get your product into the market fast?

2 A. There were, I believe, at least two people
3 that I recall that what they were doing is, they were
4 excited about the technology, thought they knew
5 somebody, and they were trying to put together a deal
6 much like a realtor might do.

7 Q. Like a real estate agent would try to sell my
8 house?

9 A. Yeah. They were -- you know, like a
10 commission. If they could come up with a way to get a
11 major manufacturer to go with our technology, they would
12 get like a 5 percent fee.

13 Q. Okay. Did -- did any of those folks have
14 actual authority from you to make a deal without talking
15 to you?

16 A. No.

17 Q. Okay. I want to talk a minute about these
18 projections from BVS and -- that you received in 2000
19 and the issue of, if that had come true, whether you
20 could have made enough product to meet those
21 projections.

22 You had -- you had a company saying, gee, we
23 think your sales are going to go like this. You've got
24 a plant operating. In order to make the quantity of
25 syringes for that BVS evaluation, would Retractable have

1 had sufficient equipment and space in Little Elm?

2 A. Certainly. We had 35 acres, and we had
3 just -- we had a building in one corner of it, and we
4 had the machinery worked out, and we had machinery for
5 the 3's and the 1's, the most popular sizes. And we had
6 the resources. We had the technology.

7 I believe today and I believe then we were the
8 world leader. There was no reason we couldn't make
9 those pro -- projections.

10 Q. What about -- would you have had to hire more
11 sales staff? Wouldn't you need more sales staff if you
12 were going to serve the market at those higher levels?

13 A. No. Because if we could have gotten into
14 the -- where you start getting the big hospitals, like
15 Presbyterian, where I wanted that contract, you get in
16 there, you get that one customer, you have one sales
17 rep, and they buy tremendous volume.

18 So you don't need more sales staff; you just
19 need customers that are bigger-volume purchasers than
20 some little clinic that we might be selling to now.

21 Q. Okay. Now -- so you don't think you would
22 need a lot more salespeople.

23 What about the machinery or the equipment?

24 A. Well, because of the -- all of the iterations
25 that we had been through, with the design, with the

1 '733, and the improvements, we had gotten this product
2 down to where you can -- our machines were making them
3 at 2 per second.

4 So that's 48 million, approximately, syringes
5 a year out of one machine.

6 And so if you take a 3- to 5-million-dollar
7 machine and you amortize that over 10 years, you're
8 talking a fraction of a penny to make the syringe for
9 assembly.

10 So then you've got a quarter of a cent for the
11 spring. The product weighs about 1-1/2 times more than
12 a standard syringe that's made at 3-1/2 cents. It's got
13 the same packaging, same sterilization, same needle.

14 So instead of 3-1/2 cents to make our syringe,
15 you're looking at 5 cents total cost, packaged, done,
16 and ready to roll out for our product in high volume.

17 If you only make one and you spend 15 million,
18 one syringe costs you 15 million; the second one 7-1/2
19 million. As your volume goes up, your cost comes down,
20 and eventually, you get down to the price of material.
21 And at that, we're about 5 cents. And they make 30
22 billion syringes a year, and we had worked out the
23 details to make these at such a high speed that we were
24 there.

25 Q. Okay. Let me ask you just a few more

1 questions that really are the reason we're here.

2 We've had a detailed infringement analysis.

3 I'm not -- we're not going to go into that with you, but
4 you know what the Integra product looks like, correct?

5 A. Yes, sir.

6 Q. And when you see that product, do you see
7 features in that product that you believe were copied
8 from your technology?

9 A. There's no question in my mind.

10 Q. Okay. And in particular, what features do you
11 find -- what's the first feature that you feel was
12 copied into that BD product from your technology?

13 A. Well, I -- I wasn't there, so I can't tell you
14 the order of it, but I can tell you that it has a
15 two-position handle with a tuck in the back, and they
16 don't have a lock in it.

17 And all retractable syringes prior to ours had
18 a lock, and that was a deal breaker. We took out the
19 lock and substituted the two-position handle, and that
20 two-position handle is in Becton Dickinson's product.

21 Q. Okay.

22 A. And along with that is a vent to prevent
23 splatter.

24 Q. All right.

25 A. Those two things make it clinically safe.

1 Q. What about the retraction mechanism in the
2 front?

3 A. On the retraction mechanism, what -- what we
4 provided was a retaining member that was frictionally
5 held on the inside wall of the barrel that could be
6 slidably placed in there, and then it could be
7 separated. We had a bridged separated version and a
8 non-bridged version, and they took the bridged version.
9 And then importantly, we had a fixed plunger seal so
10 that when you're pushing that plunger down with
11 enthusiasm -- and I hope it's not on me, but when
12 somebody is giving a fast injection, that that plunger
13 seal doesn't break off and come backwards before you
14 finish the injection.

15 And that means that plunger seal has to be
16 mounted firmly on a sturdy part of the plunger handle
17 where it won't slide.

18 And so that is in the Integra products. They
19 mounted that seal on the handle itself instead of making
20 it a sliding seal.

21 And then we put a barrier in our product so
22 that that needle doesn't go forward when you're trying
23 to retract it and break it loose and drive it into the
24 patient, which would be painful. And so there's that
25 feature.

1 Q. Okay.

2 MR. HARDIN: If I can just have a moment,
3 Your Honor?

4 (Pause in proceedings.)

5 MR. HARDIN: We pass the witness, Your
6 Honor.

7 THE COURT: Cross-examination.

8 MR. BECK: May it please the Court.

9 CROSS-EXAMINATION

10 BY MR. BECK:

11 Q. Mr. Shaw, I want to do this in several
12 different parts. And, hopefully, we can move along
13 pretty quickly.

14 But so that the jury might know, when was the
15 first time that the VanishPoint ever hit the market?
16 Tell the jury when that was, please.

17 A. I believe somewhere right close to either the
18 end of 1996 or the beginning of 1997.

19 Q. All right. Now, I want to begin with what I'm
20 going to call some general principles to see if we're
21 together and when we're not together so I can pursue it
22 a little bit further.

23 The first question I want to ask you is
24 whether or not it is okay to look at a competitor's
25 product, if it's out there in the marketplace?

1 A. I -- yes.

2 Q. As a matter of fact, in 1988 and 1989, when
3 you first saw this television show, you went out and
4 bought some syringes, did you not?

5 A. Yes, sir.

6 Q. Were any of those Becton Dickinson syringes?

7 A. They were Becton Dickinson.

8 Q. Did you look at them?

9 A. Yes, sir.

10 Q. Did you take them apart?

11 A. Yes, sir.

12 Q. Did you try to figure out how they worked?

13 A. Yes, sir.

14 Q. Did that try -- did that give you some general
15 information and knowledge about syringes and how they
16 worked at that time?

17 A. At that time -- I was asthmatic. I had given
18 myself shots when I was a kid. I knew how syringes
19 worked.

20 Q. All right. So you already knew it, correct?

21 A. Yes, sir.

22 Q. But you, obviously, wanted to learn more,
23 because you asked your pharmacist for some additional
24 syringes.

25 A. Yes, sir.

1 Q. And there's nothing wrong with that, is there?

2 A. No, sir.

3 Q. And it is also okay, when you legitimately get
4 a copy of a competitor's product, to compare that
5 perhaps with something that you're thinking about
6 designing, correct?

7 A. Yes, sir.

8 Q. Nothing wrong with that either, is there?

9 A. Offhand, I can't think of anything.

10 Q. You have done it, have you not?

11 A. Done what?

12 Q. You have compared your product to Becton
13 Dickinson's products.

14 A. Yes, sir.

15 Q. And you know that Becton Dickinson has looked
16 at your products and compared their product with the
17 VanishPoint, do you not? You've seen documents to that
18 effect.

19 A. Yes, sir, I saw that.

20 Q. Nothing wrong with that, is there?

21 A. Maybe.

22 Q. Well, it's okay for you to do it; is that
23 correct?

24 A. Well, if you're doing it to see how
25 performance works, that's a little different than seeing

1 if you can take things off of it.

2 Q. Absolutely. Absolutely. And I'll grant you
3 that.

4 But it's okay, as a general proposition, for
5 two companies that are or are not competitors to look at
6 their products and just see how they compare to one
7 another, correct?

8 A. Yes, sir.

9 Q. And by doing that -- and again, I'm not
10 talking about infringement here; I'm just talking about
11 generally.

12 By doing that, if one company or the other can
13 improve the product, then we all benefit; isn't that
14 right?

15 A. Improve which product? Improve their own
16 product --

17 Q. Either one.

18 A. -- or improve the other product?

19 Q. Either one.

20 A. Well --

21 Q. For example, you can take your product, you
22 can look at somebody else's product, and assuming it's
23 not protected by some patent, you can actually compare
24 it. And if it's not protected by a patent, you can
25 actually use part of it, can you not?

1 A. Well, but that's not what we're talking --
2 we're not talking about here, what happened here, right?

3 Q. I'm talking about general principles at this
4 point. We're going to get to the specifics in a few
5 more minutes.

6 A. Okay.

7 Q. So go back to my original question. It is
8 okay for two companies to look at each other's products,
9 and one can look at that -- the first company can look
10 at the second company's product, and assuming that
11 there's not some patent protection that prevents them
12 from doing it, they can actually improve their own
13 product by looking at the other product; is that not
14 correct?

15 A. Yes.

16 Q. It is okay, is it not, sir, for a company to
17 copy -- and I'm going to use the word that your lawyers
18 have been using in this lawsuit.

19 It is okay for a company to copy something if
20 they own it; is that not correct?

21 A. To copy something they own?

22 Q. Yes, sir.

23 A. You mean produce what they own?

24 Q. Produce. I'll use your word. It is okay to
25 produce something you own.

1 A. Well, certainly.

2 Q. You can make some changes in it, can you not,
3 if you own it?

4 A. If you own the right to the changes.

5 Q. All right. And it is also okay, is it not,
6 for you to make some changes in a product if you go out
7 and acquire that product; is that not correct?

8 A. If you've acquired it, you own it, right?

9 Q. All right. And so, again, just to be clear,
10 if you own it, you can re-engineer it, you can make
11 changes, as long as what you're doing does not in some
12 way infringe upon somebody's patent protection; is that
13 not correct?

14 A. Sounds reasonable.

15 Q. All right. Now, I want to ask you whether or
16 not -- well, let me -- let me go to this next subject,
17 if I may.

18 In terms of general principles, I want to ask
19 you whether or not -- well, let's talk about the McGary
20 patent. There's been a lot of testimony in this case
21 about the McGary patent.

22 Did you ever meet Mr. McGary?

23 A. No, sir.

24 Q. Did you ever meet Mr. Jentzen?

25 A. No, sir.

1 Q. You have had communications with Mr. Erbs,
2 have you not?

3 A. Yes, sir.

4 Q. And let me just ask you, you didn't invent the
5 claims in the McGary patent, did you?

6 A. No, sir.

7 Q. You did not invent the cutting retraction
8 mechanism, did you?

9 A. No, sir.

10 Q. Nowhere in your patents do you disclose the
11 use of a cutter to trigger retraction, do you?

12 A. Do I use the word cutter? Is that what you're
13 asking me?

14 Q. My question is very simple, sir. Nowhere in
15 your patents do you disclose the use of a cutter to
16 trigger retraction.

17 A. Well, I would disagree with that. I have a
18 mechanism where it suggests that it could be separated,
19 and certainly, that would include cutting.

20 Q. No, sir. I'm not talking about suggesting.
21 My question is: Is there anywhere in your patents that
22 you disclose the use of a cutter to trigger retraction?

23 A. Where I say the word cutter? No, sir.

24 Q. All right. None of your -- as a matter of
25 fact, none of the McGary patents incorporate your

1 frictional methodology, do they?

2 A. No, sir.

3 Q. Your patents don't say anything --

4 A. Well, wait. Excuse me one second. You said
5 none of the McGary patents, and I don't know what we're
6 supposed to do here today. There were some other
7 patents further down where his technology started
8 looking like mine.

9 Q. Well, that's a fair -- that's a fair point,
10 and let me clarify here. I'm talking --

11 MR. HARDIN: Excuse me, Your Honor.

12 MR. BECK: I'm talking about the McGary
13 patents that are involved in this case that we've
14 been -- the jury has been hearing about for the last two
15 days.

16 MR. HARDIN: We request Limiting
17 Instruction No. 1, Your Honor.

18 THE COURT: Very well. I think I've
19 already read that one time today; is that not correct?

20 MR. BECK: You did, Your Honor.

21 MR. HARDIN: You have, Your Honor.

22 THE COURT: Very well. Then I will
23 simply re-advise you that you will hear testimony about
24 prior art patents, such as the McGary patent, and about
25 a prior art device owned by a company called Saf-T-Med.

1 You should not consider this evidence in determining
2 alleged infringement, but the Court admits such evidence
3 for the limited purpose of showing alleged invalidity
4 and rebutting Plaintiff's allegation that any alleged
5 infringement is willful.

6 Now you may continue.

7 Q. (By Mr. Beck) None of the McGary patents --

8 MR. BECK: May I proceed, Your Honor?
9 I'm sorry.

10 THE COURT: Yes.

11 Q. (By Mr. Beck) None of the McGary patents that
12 the jury has heard about yesterday and today incorporate
13 your frictional methodology, do they?

14 A. Correct.

15 Q. Your patents don't say anything about a cutter
16 that cuts through or penetrates the seal on a plunger,
17 do they?

18 A. The word cutter does not appear in my patents.

19 Q. As a matter of fact, so that the jury might
20 know, your --

21 MR. HARDIN: Your Honor, there's actually
22 another instruction. I'd like to have Limiting
23 Instruction No. 4 read, talking about the description
24 that Mr. Shaw put in his patents.

25 THE COURT: Very well.

1 There's another requested limiting
2 instruction, and it's been styled or numbered No. 4.

3 We'll provide you a copy of each of
4 those.

5 You will hear evidence concerning
6 statements in the written description section of the
7 asserted patents. You should not consider this evidence
8 in determining infringement -- infringement.

9 You may consider this evidence for the
10 limited purpose of determining whether or not any
11 alleged infringement is willful, in determining whether
12 any of the asserted claims is invalid based on an
13 alleged failure to satisfy the written description
14 requirement.

15 MR. BECK: May I proceed, Your Honor?

16 THE COURT: Yes.

17 Q. (By Mr. Beck) Mr. Shaw, during the course of
18 your deposition, so that the jury might know, you were
19 actually shown a 3mL Integra, were you not?

20 A. Yes, sir.

21 Q. And you were specifically asked to look at
22 that Integra, and then you were asked a lot of questions
23 about it, were you not, sir?

24 A. I'd feel a little more comfortable if I had
25 the deposition in front of me.

1 Q. Well, let me just ask you this, and if you'd
2 like to see it, then I'll show it to you.

3 A. Okay.

4 Q. Do you remember being asked, after being shown
5 the Integra 3mL, to look at it and ask -- and answer the
6 question whether or not the needle is released for
7 retraction by the use of a cutter? Do you remember
8 being asked that?

9 A. I don't specifically remember that.

10 Q. That is a true statement, though, is it not?

11 A. That the needle is released by the use of a
12 cutter in conjunction with breaking a retaining member
13 in order to release it.

14 Q. Yes, sir. That is true, is it not, in the 3mL
15 Integra?

16 A. Yes, with that -- I mean, it is being held by
17 something.

18 Q. No, sir. I didn't ask you that. I asked you
19 whether or not the needle is released for retraction by
20 use of a cutter.

21 A. Maybe I'm not the right one. I'm too
22 mechanical. It has to be released from something.

23 Q. Let me refresh your recollection. And again,
24 so that the jury might know, you remember when your
25 deposition was taken, correct?

1 A. I've had many depositions.

2 Q. I understand that, but you remember your
3 deposition was taken on January 12, 2009?

4 A. Okay.

5 MR. BECK: And, counsel, this is Page 88,
6 Lines 6 through 9.

7 Q. (By Mr. Beck) I want you to read along --

8 MR. BECK: Your Honor, may I lean over
9 the witness?

10 THE COURT: Yes.

11 Q. (By Mr. Beck) And you see this is your
12 deposition testimony taken on January 12, 2009.

13 Do you see that?

14 A. Yes, sir.

15 Q. And the question --

16 THE COURT: Is this now on the screen,
17 Mr. Beck?

18 MR. BECK: My gosh, it is, Judge.
19 Okay. Technology is getting way ahead of me.

20 THE COURT: I was fixing to say, that's
21 why we have all this fancy equipment.

22 MR. BECK: All right. Let me see --

23 THE COURT: Do you have the screen in
24 front of you, Mr. Shaw?

25 THE WITNESS: Yes, sir.

1 Q. (By Mr. Beck) See that, Mr. Shaw?

2 MR. BECK: I'm looking for 89, Line 6.

3 Is that -- no, that's not it.

4 Judge, technology has failed us. May I
5 approach the witness?

6 Q. (By Mr. Beck) Mr. Shaw --

7 THE COURT: It's Page 89. I don't know
8 if --

9 MR. BECK: There it is. There it is.
10 Now it's back up. Okay.

11 THE COURT: Now everyone can see.

12 MR. BECK: All right.

13 Q. (By Mr. Beck) And you remember being asked:
14 Mr. Shaw, in the Integra syringe in front of you, is it
15 true that the needle is released for retraction by use
16 of a cutter?

17 And your answer at the time in January of 2009
18 was, quote, yes, I believe it is; is that correct?

19 A. Yes, sir.

20 Q. Now, so -- again, so that the jury might know
21 the procedure, after your deposition was taken, you had
22 an opportunity to review your testimony and make any
23 changes that you thought were necessary or appropriate
24 that affected the accuracy of your answers, correct?

25 A. Yes, sir.

1 Q. You didn't make any change to that, did you?

2 A. No, sir.

3 Q. Also, with respect to the 1ml, you were asked
4 about that in your deposition as well, were you not?

5 A. Well, it looks to me like both of your 3 and
6 your 1 are called Integras, are they not?

7 Q. They are. That is correct.

8 A. So that doesn't specify.

9 Q. Pardon me?

10 A. That didn't specify.

11 Q. I understand that. But you had been shown the
12 3ml, and now I'm going to ask you about the 1ml, which
13 is in another part of your deposition, okay?

14 A. Okay.

15 Q. All right. Now, is it not correct that one of
16 the elements of the Integra 1mL syringe operation is
17 that it uses a cutter to penetrate the hub and the
18 stopper?

19 A. Yes, sir.

20 Q. All right. That's true, also, correct?

21 A. Yes.

22 Q. Now, let's talk a little bit about what you
23 have told the Patent Office.

24 The jury has seen what you have said in your
25 patents. There's been some references during your

1 testimony to what you told the Patent Office, correct?

2 A. Yes, sir.

3 Q. Now, as a matter of fact, just so we're clear,
4 you did not invent the retractable syringe, did you?

5 A. Yes. I made the first one in the world.

6 Q. No, sir. I asked you, did you invent the
7 retractable syringe?

8 A. Yes, sir.

9 Q. So it's your testimony that you invented the
10 retractable syringe?

11 A. I'm not the first person to get a patent; I'm
12 the first person to invent one that actually works.

13 Q. No, sir. That's not my question. My
14 question -- you're talking about something that was
15 commercial that worked, correct?

16 A. That's pretty important for the healthcare
17 worker.

18 Q. It is important. It is important. But that's
19 not my question.

20 A. Okay.

21 Q. My question to you is, you did not invent the
22 retractable syringe, did you?

23 A. I won't agree with that, because not all
24 patents work. I invented it, but I'm not the first one
25 to try to invent it.

1 Q. I'm not going to argue with you about that
2 point, but let's just go with the patent. You were not
3 the first person to receive a patent on a retractable
4 syringe.

5 A. Correct.

6 Q. There were at least over 50 people, inventors,
7 creative people who received patents for retractable
8 syringes from the United States Patent Office; is that
9 not correct?

10 A. Yes, sir.

11 Q. And they had all -- a lot of different ideas
12 about retractable syringes, did they not?

13 A. Absolutely.

14 Q. Different designs than you did, correct?

15 A. Yes, sir.

16 Q. Different ways that retraction would work,
17 correct?

18 A. Yes, sir.

19 Q. And whenever you filed your application for
20 any of the patents in this case, one of the things you
21 have to do and you have an obligation to do -- and one
22 of your witnesses talked about a duty of candor -- you
23 have a duty of candor to the Patent Office to tell them
24 anything that you or your lawyer know about in what is
25 called the prior art, right?

1 | A. Yes, sir.

2 Q. And the prior art, so that the jury might
3 know, is any patent that somebody got before you on a
4 retractable syringe, for example, right?

5 | A. Yes, sir.

6 Q. Could even be literature, could even be an
7 article that somebody has written that described a
8 particular idea or invention, correct?

9 A. That I don't know. I'm not a lawyer.

10 | Q. Okay.

11 | A. I couldn't answer that for you.

12 Q. That's fair enough.

13 Certainly, you would agree it involves
14 patents.

15 | A. Yes, sir.

16 Q. And in your application, you listed a lot of
17 patents that people had received for inventions for
18 retractable syringes, correct?

19 A. In conjunction with my attorneys. I couldn't
20 possibly have written that patent by myself. I'll be
21 honest with you.

22 Q. No. I -- I absolutely accept that, and I'm
23 certain that that's true.

24 | Let's look --

25 MR. BECK: Just put up on the screen very

1 briefly DX3.

2 Q. (By Mr. Beck) This is the so-called McGary
3 patent, is it not, that we've been talking about in this
4 case?

5 A. Boy, that's going to confuse people.

6 MR. BECK: Can we blow that up a little
7 bit in yellow? Can you blow that up so the jury can see
8 it?

9 Excuse me. What do we have here?

10 A. No. Now it's McGary.

11 MR. BECK: Put the McGary patent back up
12 so we can see it.

13 Could you put that in yellow and blow it
14 up so the jury can see it?

15 Q. (By Mr. Beck) This is the McGary patent, what
16 we can call the '010 patent, correct?

17 A. Yes, sir.

18 Q. And the inventor there was Mr. Kern McGary and
19 William Jentzen from Cedar Creek, Texas, correct?

20 A. Yes, sir.

21 Q. And this is a patent on a safety syringe with
22 retractable needle, correct?

23 A. Yes, sir.

24 Q. Now, the McGary patent, obviously, was before
25 any of three patents that you're asserting in this case,

1 correct?

2 A. Yes, sir.

3 Q. All right. And what it says here, according
4 to the patent, an improved safety syringe with
5 retractable needle is provided which allows retraction
6 of the needle into a hollow plunger by additional
7 forward pressure on the plunger after the fluid is
8 driven from the syringe, correct?

9 A. Correct.

10 Q. No question that's before any of your three
11 patents, correct?

12 A. Yes, sir.

13 MR. BECK: Let's look at DX5, please.

14 Q. (By Mr. Beck) And you've heard of this patent.
15 This is the so-called Gillespie patent, correct?

16 MR. BECK: If we could blow this up,
17 please. You've got the wrong one. The Gillespie
18 patent.

19 All right. If you could blow this up so
20 the jury can see it.

21 Q. (By Mr. Beck) This was a patent that was
22 issued to Mr. Elgene Gillespie from Canton, Ohio. And
23 the patent was filed in May of 1992 and was issued by
24 the United States Patent Office in June of 1993,
25 correct?

1 A. Yes, sir.

2 Q. No question that was before any of your three
3 patents in this case, right?

4 A. That's what I'm reading.

5 Q. And the abstract says a syringe for giving
6 medical injections, which has an internal mechanism for
7 retracting the needle into the syringe after the
8 injection has been given and locking the needle and
9 plunger inside the barrel of the syringe to reduce the
10 risk of accidental needle pricks, correct?

11 A. Yes, sir.

12 MR. BECK: Let's put up on the screen
13 DX -- I believe it's the Botich patent. Can we put that
14 up, please.

15 Q. (By Mr. Beck) All right. This is another
16 patent issued to a Mr. Michael Botich from California
17 and a man named Thor Halseth, correct?

18 A. Yes, sir.

19 Q. And this application was filed February 15th,
20 1991, right?

21 A. Yes, sir.

22 Q. Patent issued February 23, 1993, by the United
23 States Patent Office, right?

24 A. Yes, sir.

25 Q. And the abstract here says a hypodermic

1 injection system with a retractable needle wherein the
2 needle retracts within an interior cavity of a syringe
3 plunger such that the needle is confinedly held within
4 the plunger, correct?

5 A. Yes, sir.

6 Q. No question that was before any of your three
7 patents; am I right?

8 A. I agree.

9 Q. And then there's the Murray patent, which
10 you've already referred to during your direct
11 examination, correct?

12 A. Yes, sir.

13 Q. And that's DX --

14 MR. BECK: Can we put that up on the
15 screen? That may be DX1, but I'm not positive.

16 And what's the number? I'm sorry.

17 526, Your Honor, for the record.

18 Q. (By Mr. Beck) And this is a patent issued to
19 Mr. Kenneth Murray of Littleton, Colorado, along with
20 two other people from Tennessee, right?

21 And this was filed -- the application was
22 filed September 18, '92; the date of the patent was
23 March 2nd, 1993, correct?

24 A. Yes, sir.

25 Q. And then the abstract says, it's a hypodermic

1 safety syringe, according to the present invention,
2 includes a barrel having an open end, a cone-shaped end,
3 and interior surface. A hollow needle and carriage
4 assembly is temporarily attached and is restrained by
5 four catches extending from the interior tapered
6 surface.

7 Did I read that correctly?

8 A. Yes, sir.

9 Q. Now, your '733 patent that the jury's heard
10 about was issued when? In 1997?

11 A. (No response.)

12 Q. And the record will reflect precisely when it
13 was?

14 A. Yeah. Could we --

15 Q. Let's just say roughly May of 1997. Is that a
16 fair approximation?

17 A. Well, why don't we just --

18 MR. BECK: Let's put it up.

19 Okay. Can we put up the '733 patent,
20 just so there's no question about it?

21 Q. (By Mr. Beck) Shows it was issued on May 27,
22 1997, correct?

23 A. Yes, sir.

24 Q. And the ladies and gentlemen can see. That's
25 your '733 patent, right?

1 A. Yes.

2 Q. And then your '077 patent wasn't issued until
3 more than three years later, which would be July 18,
4 2000.

5 MR. BECK: If we can bring that up so
6 Mr. Shaw can see it, too, please. And this is DX3.

7 Q. (By Mr. Beck) And this patent was issued, the
8 '733 -- excuse me.

9 This is the '077 patent and was issued on July
10 18, 2000, to Mr. Thomas J. Shaw; is that correct?

11 A. Yes, sir.

12 Q. And then your '26 -- your '224 patent wasn't
13 issued until April 1st of just last year, right?

14 MR. BECK: Let's put it back up.

15 A. I don't know if there's any significance to me
16 saying yes and having it turn out it's not right, so I
17 would just rather have it up there.

18 Q. (By Mr. Beck) All right.

19 MR. BECK: Well, let's put it up there.

20 Q. (By Mr. Beck) This is your '224 patent issued
21 to Thomas Shaw. And it shows the date of the patent is
22 April 1, 2008, correct?

23 A. Yes, sir.

24 Q. These are all examples of what we've been
25 referring to during the course of this trial as prior

1 art; is that correct?

2 A. Well, just now you've named mine and said
3 you're referring to it as prior art. You mean the other
4 ones before the 3?

5 Q. That is correct. The ones before your patents
6 are what we've been referring to during this trial, so
7 that the jury might know, as prior art.

8 A. Yes, sir.

9 Q. All right.

10 MR. BECK: Now, if we can bring up DX3,
11 and specifically Column 1, Lines 48 through 52.

12 Judge, can I step over here? I can't
13 read this.

14 THE COURT: Yes.

15 Q. (By Mr. Beck) you recognize this as being from
16 one of your patents, right?

17 A. Yes, sir.

18 Q. And what you're talking about are: The other
19 problems with the prior art are dependence on flexing or
20 breaking of internal parts by the plunger in order to
21 release the retraction mechanism and use of a diaphragm
22 at the end of the plunger, which must be penetrated by a
23 needle-holding member and spring, correct?

24 A. Yes, sir.

25 Q. And that was what you were representing to the

1 Patent Office about the prior art --

2 A. Yes, sir.

3 Q. -- and the problems with the prior art.

4 A. Yes, sir.

5 Q. And what you were trying to tell the Patent
6 Office is that what you wanted was a patent, because
7 what you had come up with was different, right?

8 A. A different way of handling the problems --

9 Q. Yes.

10 A. -- but --

11 Q. Go ahead. I'm sorry. I didn't mean to cut
12 you off.

13 A. Okay. If you look at the more important
14 sentence above it, it says: One of the problems of
15 prior art of retractable syringes is the sheer number
16 and complexity of parts.

17 Q. All right.

18 A. I still have multiple parts.

19 Q. I understand that.

20 A. I didn't make that go away. I handled them
21 better in a way that made them manageable. I'm not
22 saying I made those problems go away; I'm saying I
23 handled them in a way that made the syringe functional.

24 Q. What you refer to is one of the problems; the
25 next sentence talks about other problems, correct?

1 A. Okay.

2 Q. And let's look now at Column 2, Lines 18
3 through 26.

4 Now, you would agree, would you not, that
5 your -- that an invention in a patent is what is set
6 forth in the claims, correct?

7 A. No, sir. I'm probably not qualified to do
8 that. But I believe it includes the description, the
9 drawings, and everything we have to give to the Patent
10 Office in order to look at the entirety of the -- the
11 document in order to determine what the invention is.

12 Q. Did you testify in your deposition that the
13 elements of the claim actually determine the invention?

14 A. If I did, I'm sure you could check with an
15 attorney. I'm not one. But I doubt whether or not I'd
16 have to turn in all this stuff to the Patent Office if
17 it was simply the claims. I think it's in the context
18 of the rest of the document.

19 Q. Did you testify in your deposition that that
20 was your understanding?

21 A. Can I testify today that I'm not an attorney?

22 Q. I think the jury knows you're not an attorney,
23 and --

24 A. Okay.

25 Q. -- we're not going to hold you to a legal

1 opinion. But your understanding, as a layperson and as
2 an inventor, is that the elements of the claim in the
3 patent are -- is what actually defines the invention.

4 That's your understanding, is it not?

5 A. If you're asking me my understanding, is it
6 okay for you to -- for me to tell you?

7 Q. What I'm asking you is whether or not you
8 testified under oath about your understanding of what
9 the outline of a patented invention is, and
10 specifically, did you testify that your understanding
11 was, under oath, that the elements of a claim in the
12 patent really define and set forth the boundaries of an
13 invention.

14 Do you remember testifying to that?

15 A. I -- I don't remember saying it, but I'm
16 sitting here right now, and I can tell you what I
17 believe it is, and that is, the claims define what I
18 believe are the elements of the patent.

19 But if there's confusion or if there's not
20 clarity, then you look at the rest of the document to
21 determine what the claims mean. I'm not saying that's
22 right. That's been my understanding.

23 Q. All right. Let's start first with the
24 elements of the claim setting forth the invention, and
25 then we'll get to the -- if there's any confusion or

1 not.

2 Just so we're clear, in layman's terms, for
3 the jury to determine what your invention is, they start
4 out with what the claims set forth in the patent are,
5 correct? That's your understanding, first step in your
6 understanding.

7 A. Okay.

8 Q. All right. And is it not true that of the
9 claims you are asserting, the claims of infringement
10 against my client, that you're asserting ten patent
11 claims. You're saying that somehow my client infringes
12 on ten of the patent claims that you have asserted.

13 A. Yes, sir.

14 Q. And eight of those ten claims that you're
15 asserting, Mr. Shaw, include the term retainer member,
16 do they not?

17 A. I'll take your word for it. I mean, if that's
18 accurate, that's fine.

19 Q. All right. And you know that His Honor has
20 defined and told us what retainer member means.

21 You know that.

22 A. Where we are now, yes.

23 Q. All right.

24 A. And that becomes what the claims mean is
25 what -- what -- what he has --

1 Q. Judge Folsom.

2 A. Yes. I know it's the Judge. I'm not sure how
3 to address him completely properly, but --

4 Q. His Honor.

5 A. His Honor.

6 Q. His Honor.

7 A. Okay. His Honor. I'm sorry. I probably
8 just -- this is over for me already.

9 THE COURT: Judge Folsom will be fine.

10 Q. (By Mr. Beck) All right. With that
11 introduction, let's go to the next part of your
12 patent here.

13 And in trying to tell the Patent Office what
14 you came up with is different, you say prior art has not
15 recognized a retraction mechanism with separable parts
16 that relies entirely on clamping force or friction at a
17 smooth-walled reduced diameter transition zone in the
18 barrel with mating lands, which are slidably or
19 separately released, in response to a relatively low
20 thumb pressure while having resistance to premature
21 retraction and high blowout pressure resulting from high
22 pressure produced in the fluid chamber during an
23 injection, correct?

24 A. That's what it says.

25 Q. And that's what you're representing to the

1 Patent Office in order to get your patent, correct?

2 A. Yes.

3 Q. You're telling them that the prior art -- what
4 you have come up with is different from the prior art,
5 correct?

6 A. Certainly what I came up with is different
7 from the prior art.

8 Q. And is it not correct that to overcome what
9 you believe were the problems and the difficulties in
10 the prior art, that you made a change in the design that
11 didn't utilize some of the features of the prior art.

12 Fair statement?

13 A. I'm a little more comfortable with I put
14 together a combination of solutions that resulted in
15 something that would handle the hydraulic and mechanical
16 forces.

17 Q. Well, again, you remember being asked in your
18 deposition specifically -- and if you want me to
19 approach with it, I'll be glad to do that.

20 You remember being asked, and I quote --

21 MR. BECK: Counsel, this is Page 67, Line
22 21.

23 Q. (By Mr. Beck) QUESTION: You had to overcome
24 difficulties with breaking of internal parts and
25 penetration of a diaphragm at the end of the plunger?

1 Do you recall being asked that?

2 A. I don't recall being asked that, but I -- I
3 agree I had to overcome those difficulties, and I did --

4 Q. All right.

5 A. -- by design of the part I made.

6 Q. And that's my point. You testified in your
7 deposition, yes, you did have to overcome them, correct?

8 A. Yes.

9 MR. HARDIN: Counsel, can we have the
10 whole answer read, please?

11 MR. BECK: Sure.

12 Q. (By Mr. Beck) QUESTION: You had to overcome
13 difficulties with breaking of internal parts and
14 penetration of a diaphragm at the end of a plunger.

15 ANSWER: Yes. And I did overcome them by
16 making designs that didn't utilize some of those
17 features to some extent. You can't make anything in the
18 world of science that doesn't have some flexing.

19 Everything flexes when you move it.

20 And that is a correct statement; is that -- is
21 that not true?

22 A. Yes.

23 Q. Now, I want to change subjects slightly.

24 The patent claims that you are asserting in
25 this case do not have a threaded attachment as part of

1 the needle assembly; is that not correct?

2 A. The patent claims, I don't think they
3 address -- I don't think they limit. I think they talk
4 about frictionally held, and so I -- are you asking me
5 if the word threading appears in the patent?

6 Q. What I'm asking you is whether or not the
7 patent claims that you're asserting in this case -- I'm
8 talking about your patent claims you're asserting --
9 they do not have a threaded attachment as part of the
10 needle assembly, do they?

11 A. They do not restrict in any way from being
12 able to use a threaded attachment as part of the needle
13 assembly. There's nothing in there that would restrict
14 that.

15 Q. No, sir. I didn't ask you whether it
16 restricted it. I asked you whether or not the claims
17 that you're asserting in this case say anything about a
18 threaded attachment as part of the needle assembly.

19 Did they say anything about it?

20 A. The word threaded is not in the claims.

21 Q. The Integra 3mL does have a threaded
22 attachment, does it not?

23 A. Yes, sir.

24 Q. The patent claims you are asserting in this
25 case do not have a removable needle assembly; is that

1 not correct?

2 A. It doesn't restrict from whether or not -- it
3 doesn't -- it doesn't say you can't have a removable
4 assembly.

5 Q. No, sir, I didn't ask you that.

6 My question is: Do the patent claims you're
7 asserting in this case, those patent claims, they do not
8 have a removable needle assembly? Talking about the
9 claims. They do not have a removable needle assembly,
10 do they?

11 A. I think they imply that anything that fits
12 within the claims. I'll -- when you ask me, I will tell
13 you I don't believe the word removable is in there.

14 Q. Mr. Shaw, did you testify under oath in
15 January of this very year that the claims we're
16 asserting in this case do not have a threaded attachment
17 in here? Did you testify to that?

18 A. I don't think I -- I'm sitting here now and
19 I'm telling you I don't believe the claims are
20 restricted from anything, unless it's restricted through
21 the claims, which I believe the Court has made a
22 determination of what those claims mean.

23 Q. No, sir. Maybe I asked the question poorly.
24 That's not my question.

25 THE COURT: Mr. Shaw, if you'll listen

1 carefully to the question, I think this will move along
2 quickly. Then, obviously, Mr. Hardin can follow up with
3 redirect.

4 Listen to the question.

5 Q. (By Mr. Beck) My question to you is: Did you
6 testify under oath as early as January of this year that
7 the claims we're asserting in this case do not have a
8 threaded attachment in them? Did you testify to that?

9 A. If it says I did, I did.

10 Q. All right. That's -- the Integra 3mL does
11 have that threaded attachment, does it not?

12 A. It has a connection, yes.

13 Q. And the Integra 3mL has a removable needle
14 assembly, does it not?

15 A. Yes, sir.

16 Q. That's a difference between your patent claims
17 and the Integra 3mL; is that not correct?

18 A. No, sir.

19 Q. You disagree with that?

20 A. Yes, sir.

21 Q. All right. Let me talk a little bit on the
22 way how the needle is released, okay, in your invention.

23 First, would you agree that just because two
24 pieces in a needle assembly of a retractable syringe
25 touch does not mean that there is a frictionable holding

1 mechanism as defined in your patents?

2 Would you agree with that?

3 A. If they touch hard, yes. If they barely
4 touch, very little, it's a degree.

5 Q. Right. And that's my point. The mere fact
6 that if two -- if you put your hands together, there's
7 some friction, right?

8 A. Right.

9 Q. Okay. So that anytime you've got two objects
10 that are together, there's going to be some amount of
11 friction; may be minimal, but there's going to be some,
12 right?

13 A. Correct.

14 Q. Now, we looked a few moments ago at the Botich
15 '599 patent.

16 A. I do want to -- excuse me -- but I don't want
17 to -- if there's a lubricant in there, it could be very
18 minimal. If you just (indicates) -- I mean, I don't
19 want to be on the record saying something that's not
20 correct.

21 I mean, you could have two surfaces with a
22 lubricant, and with a lubricant, there would be
23 essentially no friction.

24 Q. All right. I'm not talking about lubricants.
25 I'm not talking about lubricants.

1 Now, the Botich patent. The Botich patent
2 described a retractable syringe where they actually had
3 hooks that held the needle-holder before retraction,
4 correct?

5 A. Correct.

6 Q. And there are certainly some friction present
7 in the Botich syringe, is there not?

8 A. There is no Botich syringe, if you're saying
9 in the Botich patent.

10 Q. Well, that's just -- let me use the word
11 patent.

12 There is some friction present in the object
13 that is the subject of the Botich patent.

14 A. Yes.

15 Q. All right. But even though there's some
16 friction present when hooks hold a needle-holder, as in
17 Botich, that's not a frictional mechanism, is it? Not a
18 frictional retainer mechanism?

19 A. You know, it would help me a lot on this,
20 because I don't want to -- why don't you take me to the
21 picture of the Botich patent, show me the hooks, show me
22 where they're touching, and let's get this right.

23 Q. What if I show you your deposition testimony
24 under oath; would that help you?

25 A. Well, sure.

1 MR. BECK: Counsel, Page 236, Lines 12
2 through 17.

3 MR. HARDIN: What's the date?

4 MR. BECK: It's January 13, 2009.

5 Q. (By Mr. Beck) Mr. Shaw, do you see at the top
6 of the page -- I'm talking to you about the Botich '599
7 patent.

8 You said you have seen copies of the Botich
9 patent before.

10 A. Yes.

11 Is this in January of this year?

12 Q. Yes, sir. Do you see it?

13 A. I don't believe you were the one that did this
14 deposition.

15 Q. It doesn't matter who took the deposition.

16 A. Okay. Okay.

17 Q. It's your testimony under oath, right?

18 A. I'm sorry. I was trying to help.

19 Q. And the question at Line 12 is: And do you
20 believe that these hooks operate as a frictional holding
21 mechanism?

22 And you say: Primarily, they do not act as a
23 frictional holding mechanism. Primarily, they operate
24 that you pull the hooks apart, and then the
25 needle-holder goes through that.

1 Correct?

2 A. Yes, sir.

3 Q. And that's a true statement, is it not, sir?

4 A. Yes, sir.

5 Q. So just because you have hooks doesn't mean

6 that's a frictional retraction mechanism; is that not

7 correct?

8 A. Yes, sir.

9 Q. Now, whenever you were developing your

10 VanishPoint, you looked at Becton Dickinson's standard

11 syringes, did you not?

12 A. Yes, sir.

13 Q. And you didn't see anything wrong with that,

14 did you?

15 A. With the syringes?

16 Q. No. Looking at the syringes whenever you were

17 developing the VanishPoint?

18 A. No, sir.

19 Q. I assume you bought them at a store or got

20 them in the marketplace somehow.

21 A. The local pharmacist gave them to me.

22 Q. Okay. Now, the jury's heard about this

23 company called Saf-T-Med, and I believe you told the

24 ladies and gentlemen of the jury that you had obtained

25 from Saf-T-Med one or more of their syringes; is that

1 correct?

2 A. Yes, sir.

3 Q. And I believe you've already told us that
4 Lillian Salerno -- by the way, so the jury might know,
5 what was her position with the company at the time?

6 A. She was the COO, Chief Operating Officer.

7 Q. Chief Operating Officer of the company?

8 A. Yes, sir.

9 Q. And you told the ladies and gentlemen of the
10 jury that when you found out she had actually
11 misrepresented her -- in fact, she used a different
12 name, too, didn't she? Used the name Vickie Jenkins?

13 A. Yes, sir.

14 Q. Told the people over at Saf-T-Med, who were
15 trying to come up with a syringe, that her name was
16 Vickie Jenkins, and asked them to please send some
17 samples because she was interested in them, to send them
18 to this doctor's office, right?

19 A. That's --

20 Q. That's your --

21 A. -- my understanding from reviewing documents.
22 I wasn't there. But that's what I believe.

23 Q. And the doctor's office was one of your board
24 members, right?

25 A. Yes, sir.

1 Q. And so the -- after misrepresenting herself as
2 a woman named Vickie Jenkins, these syringes from
3 Saf-T-Med were sent to Dr. Shiu's office. I guess
4 Vickie Jenkins in care of Dr. Shiu's office. And that's
5 how you -- and I mean, you, RTI, got copies of
6 Saf-T-Med's syringes, correct?

7 A. That's where it starts getting a little fuzzy.
8 Since I wasn't there, I don't know who it was addressed
9 to. All I know is what was represented to me and what
10 I've been reading from and hearing from others.

11 Q. Okay. You told the jury that you told Lillian
12 Salerno that's not the way we do things, and she
13 shouldn't do it.

14 But so that the jury also might know, once you
15 got those; you took them apart, correct? Inspected
16 them?

17 A. That was prior to me knowing how they were
18 obtained.

19 Q. You inspected them after you got them,
20 correct?

21 A. Yes, sir.

22 Q. You took them apart?

23 A. No, sir.

24 Q. You -- you triggered the retraction mechanism,
25 did you not?

1 A. Yes, sir.

2 Q. Do you remember testifying in your deposition
3 that you did trigger the mechanism and you did take it
4 apart to some extent?

5 A. Yes, sir.

6 Q. So you did take it apart to some extent?

7 A. Yes, sir.

8 Q. All right. Now, not only did you look at it,
9 but you had a man named Bob Stathopoulos -- and I may be
10 mispronouncing that name -- am I correct?

11 A. No, that's not correct.

12 Q. Do you remember being asked in your deposition
13 on January 12th, 2009: Do you know whether the syringe
14 was sent to Mr. Stathopoulos -- again I may be
15 mispronouncing that -- in New Jersey or whether he saw
16 it on site at RTI?

17 And do you remember saying and I quote: I
18 feel pretty confident he would have seen it at Little
19 Elm.

20 Do you remember testifying to that?

21 THE COURT: What page is this, Mr. Beck?

22 MR. BECK: It's Page 181, Your Honor,
23 Lines 3 through 7.

24 Q. (By Mr. Beck) Remember testifying to that?

25 A. Yes, sir.

1 Q. So he did see it in all likelihood, correct?

2 A. I don't know.

3 If I explain, then I think you'll understand,
4 and it will clear it all up.

5 Q. Well, you did testify that he did see it.

6 That's what you testified in January of this year.

7 A. I think I testified that if he saw it, more
8 likely he saw it in Little Elm, because I knew I hadn't
9 sent it to New Jersey.

10 Q. Yes, sir. You felt pretty confident he would
11 have seen it at Little Elm.

12 A. If he -- I was told that he had seen it. If
13 he saw it, it would have been Little Elm.

14 Q. And tell the jury who he is. He is a
15 consultant with a product development technology
16 company, is he not?

17 A. I think he was a sole proprietor -- he worked
18 for himself.

19 Q. He was a consultant to you-all, was he not,
20 sir?

21 A. Yes, sir.

22 Q. You also had a man named Tod Hewitt looked at
23 the Saf-T-Med syringe, did you not?

24 A. I don't know if he looked at it.

25 Q. Did you testify in January of this year that

1 he looked at it, too?

2 A. I believe what I testified is we sent a list
3 to the attorneys of everybody who might possibly have
4 seen it. And I don't have any knowledge that these
5 other people saw it. But we made a thorough attempt
6 that anybody who may have seen it would be on the list.
7 I believe that's what I testified to.

8 Q. All right. Well, let's go at it that way in
9 the interest of time.

10 Tod Hewitt was on the list, wasn't he?

11 A. Yes, sir.

12 Q. And he's a design engineer at RTI, correct?

13 A. Yes, sir.

14 Q. Jim Hoover was on the list that looked at the
15 Saf-T-Med syringe, correct?

16 A. I don't know if he saw it, but he's on the
17 list.

18 Q. He's your production manager, isn't he?

19 A. Yes, sir.

20 Q. A man named Gary Wood looked at the Saf-T-Med
21 syringe, or he was on the list?

22 A. Yes, sir.

23 Q. And, of course, Lillian Salerno, your Chief
24 Operating Officer she looked at it, and she was on the
25 list, correct?

1 | A. Yes, sir.

2 Q. And you told the jury about the letter that
3 your lawyer sent to the lawyer for Mr. Erbs and how
4 Mr. Erbs' lawyer sent the letter back, correct?

5 Didn't you tell the jury about that a little
6 earlier in the day?

7 A. Our lawyer sent a letter to Jim Erbs, and Jim
8 Erbs' lawyer sent a letter back to our lawyer, I
9 believe.

10 | Q. All right.

11 MR. BECK: Let me see DX13, please.

12 Let's let the jury take a look at
13 these.

14 THE COURT: We're about to look at
15 Exhibit 13?

16 MR. BECK: Yes, sir.

17 THE COURT: Do you want Instruction No. 3
18 read?

19 Limiting Instruction No. 3, and,
20 likewise, you will be given a copy of this. You will
21 see Defendant's Exhibit 13, and you may hear testimony
22 regarding that exhibit. You should not consider
23 Defendant's Exhibit 13 in determining infringement or
24 invalidity.

25 Defendant's Exhibit 13 is admitted for

1 the limited purpose of rebutting Plaintiff's allegations
2 that any infringement was willful.

3 Q. (By Mr. Beck) Now, this letter marked as
4 Defendant's Exhibit 13 was your lawyer's letter to
5 Mr. Norvell, who is Saf-T-Med's lawyer, or Jim Erbs'
6 lawyer, right?

7 A. I'm sorry. Could you tell me what your
8 question was one more time?

9 Q. I will be glad to.

10 This letter is a letter from Mr. Harry Watson,
11 correct?

12 A. Yes, sir.

13 Q. And Mr. Harry Watson is your lawyer, RTI's
14 lawyer?

15 A. Yes, sir.

16 Q. And he's your patent lawyer?

17 A. Yes, sir.

18 Q. And you approved this letter before it went
19 out, did you not?

20 A. Yes, sir.

21 MR. BECK: And if we may look about the
22 third -- actually, it's the last paragraph on the page.

23 Q. (By Mr. Beck) This was after the people on
24 that list inspected, looked at, and to some extent at
25 least, took apart the Saf-T-Med syringe and triggered

1 the retraction mechanism.

2 And what your lawyer is telling Saf-T-Med is:
3 Be assured also that our client -- which would be RTI --
4 has no desire to use the concept disclosed in the McGary
5 patent, which is embodied as expected in the Saf-T-Med
6 syringe.

7 That's one of the things that you approved
8 before it went out, correct?

9 A. Yes, sir.

10 Q. So no question that the Saf-T-Med syringe
11 you-all were looking at encompassed the McGary patent?

12 A. The -- the concept that was disclosed -- we're
13 talking about a concept that was disclosed in the
14 McGary -- McGary patent and that was that slidable seal.
15 We had no interest in that slidable seal.

16 Q. Okay. So you say: Our client has no desire
17 to use the concept disclosed in the McGary patent, which
18 is embodied as expected in the Saf-T-Med syringe,
19 correct?

20 A. Correct.

21 Q. And then the lawyer for the other side wrote
22 back. And that's DX14, correct, sir?

23 See, this letter is dated May 8th from 1997
24 from Mr. William C. Norvell to Mr. Harry Watson, your
25 lawyer.

1 A. Okay.

2 Q. And if we can look at the second page, the
3 first full paragraph starting out, thirdly. It's that
4 first sentence.

5 And after receiving your lawyer's letter, the
6 lawyer for Saf-T-Med writes back: Thirdly, we
7 appreciate your acknowledgement in the last paragraph of
8 Page 1 of your letter -- which we just looked at -- that
9 Saf-T-Med, Inc., has not employed any technology of
10 Retractable Technologies, Inc.

11 Do you see that, sir?

12 A. Yes, sir.

13 Q. And you agree with that, do you not?

14 A. No, sir. That's written by Mr. Erbs' lawyer,
15 not my lawyer.

16 Q. And did your lawyer ever respond and say no,
17 no, no, no, that's not quite correct; we think you do?
18 That never happened, did it?

19 A. Mr. Erbs didn't have a product at the time,
20 and we were trying to avoid litigation. And he asked me
21 to write a letter, CEO to CEO, and try to calm the
22 situation down.

23 Q. You had their prototype, did you not? The
24 Saf-T-Med prototype, you had it?

25 A. Yes.

1 Q. You looked at it or people under you -- people
2 with the company looked at it and took it apart to some
3 extent?

4 A. I think I testified that I took it apart to
5 some extent. I don't know that the other people saw it,
6 but we put on the list everybody who might remotely have
7 seen it.

8 Q. And after receiving this letter from
9 Saf-T-Med's counsel saying: We appreciate your
10 acknowledgement in the last paragraph of Page 1 of your
11 letter that Saf-T-Med has not employed any technology of
12 RTI, nobody from RTI, not you, not Lillian Salerno, not
13 Mr. Watson or anybody ever wrote back and said that's
14 not right, you are using some of our technology. We saw
15 it in the prototype.

16 That never happened, did it?

17 A. We never sent a letter.

18 Q. Now, you became aware at some point that
19 Becton Dickinson purchased the Saf-T-Med technology,
20 correct?

21 A. Yes, sir.

22 Q. Which included the Shaw patents; is that not
23 correct?

24 MR. BECK: I'm sorry. It's been a long
25 day.

1 THE WITNESS: It's getting late for me.

2 MR. BECK: I know that confused the jury.

3 THE WITNESS: It confused me.

4 MR. BECK: Long day. Sorry.

5 Q. (By Mr. Beck) You know that when Becton
6 Dickinson purchased Saf-T-Med that it acquired the
7 McGary patent? You know that?

8 A. (No response.)

9 MR. HARDIN: BD-owned, Patent Instruction
10 No. 5, Your Honor. We request --

11 THE COURT: Now I will give you
12 Instruction No. 5.

13 You will hear evidence concerning patents
14 owned by BD. The fact that BD has obtained patents is
15 not a defense to any alleged infringement in this case.
16 The Court admits such evidence for the limited purpose
17 of rebutting Plaintiff's allegations that any alleged
18 infringement was willful.

19 Mr. Beck, before we go into this topic,
20 would it be a convenient --

21 MR. BECK: Yes, sir, if you would.

22 THE COURT: Why don't we let the jury
23 step out, Mr. Potts.

24 COURT SECURITY OFFICER: All rise.

25 (Jury out.)

1 THE COURT: Mr. Beck, Mr. Hardin?

2 (Bench conference.)

3 THE COURT: Just a second till they're
4 out.

5 MR. BECK: Judge, you ought to be able to
6 just hold up sign one for the --

7 THE COURT: Is this all 5-0 now? Have we
8 covered all of 5-0?

9 MR. HARDIN: I think -- I think they get
10 one. I think it's theirs.

11 THE COURT: I say let's give it to them.
12 Just say 1, 2, 3, 4, 5.

13 All right. I'll just mention, the
14 60 Minutes' segment, I don't think it violated any of
15 the limine order, but you want me to do anything more --

16 MR. BECK: No. He's dropped it. He's
17 dropped it. We're not --

18 THE COURT: I don't want to bring any
19 attention, unless you want me to.

20 MR. BECK: No, no, no, no, no. No, sir.
21 No, sir.

22 THE COURT: I'm going to give my normal
23 instructions not to do any investigation. I just hate
24 for them to jump on the computer --

25 MR. BECK: Getting on the internet.

1 THE COURT: -- and go to 60 minutes. I
2 don't know.

3 MR. BECK: That might not be bad to
4 mention.

5 THE COURT: Well, you need to give it
6 some thought, because I'm not going to -- as I mentioned
7 to you, I'm not going to --

8 MR. BECK: Okay.

9 THE COURT: I won't mention it to you and
10 let you decide if you want any additional instruction.

11 MR. BECK: Okay.

12 THE COURT: But I can -- if they follow
13 my instructions, they shouldn't do that --

14 MR. BECK: They won't do it.

15 THE COURT: -- you know.

16 We'll be in recess.

17 MR. HARDIN: Thank you, Your Honor.

18 THE COURT: Mr. Beck, how much longer do
19 you anticipate?

20 Mr. Hardin, if you want to hear this.

21 MR. BECK: 15 or 20 minutes.

22 THE COURT: Okay.

23 (Bench conference concluded.)

24 (Recess.)

25 COURT SECURITY OFFICER: All rise.

1 (Jury in.)

2 THE COURT: Please be seated.

3 You may continue with cross-examination.

4 MR. BECK: Thank you. Thank you, Your
5 Honor.

6 Q. (By Mr. Beck) I think where we left off, we
7 had talked about how you became aware of the fact that
8 Becton Dickinson had acquired Saf-T-Med.

9 You also became aware, did you not, that
10 Becton Dickinson had obtained a license from a company
11 called Med-Design. You became aware of that, also, did
12 you not?

13 A. Yes, sir.

14 Q. I think you've also told the Ladies and
15 Gentlemen of the jury that your company, RTI, went
16 public, correct?

17 A. Yes, sir.

18 Q. And you went public in the year 2000; is that
19 right?

20 A. Yes, sir.

21 Q. Now, what that means is that when you went
22 public, that means that people can buy your shares. In
23 other words, people -- the public generally can buy
24 stock in your company, correct?

25 A. Yes, sir.

1 Q. And you're listed on the American Stock
2 Exchange; is that right?

3 A. Yes, sir.

4 Q. And you know, do you not, that a publicly held
5 company in this country has to make certain filings with
6 the Securities and Exchange Commission.

7 A. Yes, sir.

8 Q. And you know that whatever filings are made,
9 the representations that the company makes must be true.

10 A. Yes, sir.

11 Q. And there are penalties, if they're not true.
12 You know that.

13 A. Yes, sir.

14 Q. And for example, the 10(k), which is one of
15 these publications that your company files with the SEC,
16 you, as the CEO, have to sign them, do you not?

17 A. Yes, sir.

18 Q. And you've got to certify that certain things
19 are accurate and true, correct?

20 A. Yes, sir.

21 Q. That's part of what we all know as the
22 Sarbanes Oxley law that was passed after the Enron deal,
23 right?

24 A. Yes, sir.

25 Q. Now, as part of a publicly held company, you

1 periodically have communications with financial analysts
2 that follow your stock, right?

3 A. Periodically, yes.

4 Q. Yes. And you have conversations with them, do
5 you not?

6 A. Yes, sir.

7 Q. And part of those conversations, the purpose
8 of them is to allow them to ask you questions about the
9 company so they can get an idea about how the company's
10 doing and how it's likely to do in the future, right?

11 A. Yes, sir.

12 Q. And you participate personally as the CEO in
13 those conversations, correct?

14 A. I have.

15 Q. And you had a conversation with a Mr. Black
16 with Paine Webber -- and he's a financial analyst. You
17 know him, do you not?

18 A. I believe I only talked to him maybe once or
19 twice.

20 Q. All right. And Mr. Black with Paine Webber,
21 you had a conversation with him in August, I believe of
22 the year 2000; is that right?

23 A. If -- if that's what -- yes, if that's what --
24 well, I don't know when it was.

25 Q. All right. Well, whenever it was, it was

1 after, was it not, you had seen the Saf-T-Med prototype?

2 A. If there was in that conversation discussion
3 about me having seen it, yes.

4 Q. And there -- this was after BD had acquired
5 Saf-T-Med and taken a license from Med-Design.

6 A. Without the conversation, it may have been
7 represented to me that that had happened from them, and
8 I may have been inquired as to what I thought about
9 that, and I may have responded to that.

10 I don't have any personal knowledge of when
11 Saf-T-Med acquired -- excuse me -- when Becton Dickinson
12 acquired what they acquired or the extent of what they
13 acquired. I just don't have that information.

14 Q. You told the jury earlier in your testimony
15 that there's such a thing as a 510(k) that you must file
16 with the Food and Drug Administration if you want to
17 market a safety product like a medical device?

18 A. Yes.

19 Q. And you've done that for VanishPoint, right?

20 A. Yes.

21 Q. And you actually got a copy of the 510(k) that
22 Becton Dickinson filed for the Integra, did you not?

23 A. Somebody on our staff.

24 Q. All right. And do you remember that during
25 this conversation that you had with this Mr. Black, this

1 financial analyst with Paine Webber, you specifically
2 talked to him about Becton Dickinson's 510(k) for the
3 Integra, did you not?

4 A. It would sure help me if you had the
5 conversation.

6 MR. BECK: May I approach to refresh his
7 recollection?

8 A. It's been 10 years.

9 Q. (By Mr. Beck) This is Deposition Exhibit 68
10 for reference. See where it talks about a call between
11 Thomas Shaw, Doug Cowan, and Ian Black at Paine Webber
12 on August 22nd at 4:38 p.m.? Do you see that?

13 A. Yes.

14 Q. And Doug Cowan is your chief financial
15 officer?

16 A. Yes, sir.

17 Q. Now, in your conversation -- and let me just
18 refresh your recollection with this, Mr. Shaw. T.J.S.,
19 those are your initials; is that correct?

20 A. Yes, sir.

21 Q. And you say, and I quote, they did a 510(k).
22 Now, they there is Becton Dickinson; is it not?

23 A. Is it okay --

24 Q. Sure.

25 A. -- to look at it in --

1 Q. Absolutely.

2 MR. HARDIN: Counsel, I'm sorry. Can I
3 have the date of the deposition?

4 MR. BECK: It's not a deposition. It's
5 Deposition Exhibit 68.

6 MR. HARDIN: Oh, I'm sorry.

7 MR. BECK: I'm just using it to refresh
8 his recollection.

9 A. Okay. I guess I'm referring to Becton
10 Dickinson. It doesn't say that, but it looks like it
11 implies that.

12 Q. (By Mr. Beck) And do you remember testifying
13 in your deposition that was who you were referring to,
14 Becton Dickinson?

15 A. In -- in one of the depositions?

16 Q. Yes, sir.

17 A. I'm okay with that.

18 Q. All right.

19 A. I mean, I don't know that it wasn't.

20 Q. All right. And what you say is: They did a
21 510(k), and there's a couple of problems with the
22 510(k).

23 First, it's for, not the Med-Design approach,
24 but actually the Saf-T-Med approach.

25 Now, that's something you told Mr. Black; is

1 that correct?

2 A. Yes, sir.

3 Q. And somebody says, Right.

4 And then you follow up and say: Which is a
5 cutting tool.

6 And then you continue: And then the
7 Med-Design would allow them -- which is Becton
8 Dickinson, I take it -- to change needles, but what they
9 submitted to the 510(k), based on what we got from the
10 FDA on their 510(k), shows that it is a cutting -- it
11 has a cutting tool in it.

12 And you remember telling that to Mr. Black,
13 right?

14 A. I'm reading it. Okay.

15 Q. And so if there was any value of the original
16 patent at all, maybe it's just this part about changing
17 needles, which would mean that it would expire with the
18 '89 patent deal.

19 Now, you were talking there about the
20 Med-Design patent, correct?

21 A. That -- that seems right.

22 Q. All right. And you were telling Mr. Black
23 these things because you were trying to point out what
24 you perceived to be the problems with what was in the
25 Becton Dickinson 510(k) that was filed with the Food and

1 Drug Administration, correct?

2 A. I think in the context of that conversation, I
3 was trying to point out to them that -- more likely,
4 that Becton Dickinson was not using the Med-Design
5 technology rather than what was in -- in 510(k)s, you do
6 not have -- they redact them. You do not normally have
7 a technical description of the product.

8 Q. I understand that, but you actually went
9 further and said they're not using the Med-Design
10 approach; they're actually using the Saf-T-Med approach,
11 correct? That's what Becton Dickinson is using,
12 correct?

13 A. Yes, sir.

14 Q. And then you focus on -- on the fact that that
15 design is the cutting tool technology, right?

16 A. Yes, sir.

17 Q. Now, you also issued a press release, did you
18 not, in February of 2000, that talked about the Becton
19 Dickinson acquisition and the Becton Dickinson
20 licensing, did you not?

21 A. A press release --

22 Q. Yes.

23 A. -- or a letter to my shareholders?

24 Q. A press release. Remember issuing a press
25 release?

1 A. It's ten years ago. I --

2 Q. All right. Let's --

3 A. If you could just help me. I'm sorry.

4 Q. Yes, sir.

5 A. I'm just not -- I'm not --

6 Q. And that's fair. And that's fair.

7 MR. BECK: Let's bring up DX146. And I
8 want to focus on the last sentence on the first page so
9 the jury can see it.

10 Q. (By Mr. Beck) See where it's quoting you?
11 It says: Although prototypes were produced in the early
12 1990s, production problems have thus far proved
13 insurmountable. You say BD -- that's Becton Dickinson,
14 right?

15 A. Yes, sir.

16 Q. None of the Becton Dickinson patent
17 acquisitions incorporates the revolutionary and
18 successful friction methodology utilized in the
19 VanishPoint.

20 That's what your press release said in
21 February of 2000, correct?

22 A. Yes, sir.

23 Q. And that was true at the time you issued it;
24 is that not correct?

25 A. It -- yeah, but it doesn't refer to my

1 patents. It says that friction methodology used in the
2 VanishPoint.

3 Q. Yes, sir. It's talking about the technology,
4 isn't it?

5 A. Yes, that we're using, not -- not the patents.

6 Q. Yes, sir. What you're saying is that none of
7 the Becton Dickinson patent acquisitions incorporate the
8 revolutionary and successful friction methodology
9 utilized in the VanishPoint.

10 A. Yes, sir.

11 Q. That was a true statement that was made,
12 correct?

13 A. Yes, sir.

14 Q. So the jury has now seen not one, not two, but
15 three different times when you've made representations
16 to either financial analysts, to the public generally,
17 or to a lawyer with Saf-T-Med that the Saf-T-Med
18 technology is different than the VanishPoint technology,
19 correct?

20 A. Than our product.

21 Q. Sir?

22 A. You're saying different than our product, not
23 different than our patent.

24 Q. I'm saying different than the technology.

25 A. It says VanishPoint, and that's a product, not

1 a technology.

2 Q. Yes, sir.

3 A. It has technology in it.

4 Q. Exactly. That's my point.

5 A. But we have other technology. I'm trying to
6 help you, but I -- I don't want to say something that's
7 not accurate.

8 Q. Well, you don't make any exceptions in these
9 three different statements you've made to three
10 different people, have you?

11 A. Well, but I'm talking about what's in our
12 product, and then you're turning it into what I own --
13 not I -- I've licensed, what RTI owns in technology,
14 which is separate from the product. They're not one and
15 the same.

16 Q. No, sir. My question is about technology.
17 And you have repeatedly told people that the technology
18 in your product is different than the technology that
19 the Saf-T-Med product has; is that not correct? Isn't
20 that what you're doing?

21 A. In our product, yes.

22 Q. All right. Now, you first saw an actual
23 Becton Dickinson Integra syringe at least as early --
24 well, at least by early 2002, correct?

25 A. I believe that's -- somewhere around there is

1 when they finally got something to the market.

2 Q. And that was before your conversation with the
3 financial analyst, Ian Black, right?

4 A. Did that have a date on it?

5 Q. It was August. And I'm not sure what year it
6 said on the document itself.

7 A. Then without the year, I don't know how I can
8 help you.

9 Q. So you're not sure?

10 A. Right.

11 Q. Okay. But if you saw the -- you filed this
12 lawsuit in 2000 -- June of 2007; is that correct?

13 A. This current lawsuit?

14 Q. Yes, sir.

15 A. I believe that's correct.

16 Q. And that would be roughly more than five years
17 after you first saw the actual BD Integra syringe,
18 correct?

19 A. Yes, sir.

20 Q. Now, I've got a few more questions, and then
21 mercifully, I'll be finished, okay?

22 A. Okay.

23 Q. All right. Now let's talk a little bit about
24 your patents again.

25 The Integra 3mL has an inner and an outer

1 plunger, does it not?

2 A. The plunger's made out of two separate pieces.
3 One fits inside the other.

4 Q. And Becton Dickinson calls them an outer
5 plunger and an inner plunger, correct?

6 A. I -- I don't know what Becton Dickinson calls
7 them. I don't -- my -- my concern is -- and again, it
8 may sound like I'm trying to be too careful, but I don't
9 think either part alone is a plunger. I think it takes
10 both pieces to make a plunger.

11 Q. Well, there's nothing in your patents that
12 discloses --

13 MR. HARDIN: Your Honor, may we approach
14 please?

15 THE COURT: Very well.

16 (Bench conference.)

17 MR. HARDIN: There was a specific in
18 limine requested on this point of a two-piece plunger.

19 THE COURT: I think in the claim
20 construction, there was an order of the Court that it
21 didn't have to be one piece.

22 MR. HARDIN: Right.

23 THE COURT: And I think there is a motion
24 in limine --

25 MR. BECK: That wasn't what I was trying

1 to suggest.

2 THE COURT: Okay. I guess he's being
3 very cautious. Where are you going on this?

4 MR. BECK: Basically, I just want to ask
5 him whether or not there's anything that discloses the
6 type of plunger that the Integra mL has.

7 MR. HARDIN: Well, Your Honor, that's
8 just not -- that's not relevant. Again, that would say
9 that the patent has to disclose every possible variation
10 of these --

11 THE COURT: I think I'm going to sustain
12 that. Let's move on.

13 MR. BECK: That's fine. Thank you, Your
14 Honor.

15 (Bench conference concluded.)

16 Q. (By Mr. Beck) You talked about --

17 MR. BECK: Well, let's bring up B060,
18 please.

19 Q. (By Mr. Beck) I just have a few questions I
20 want to ask about a few particular demonstratives, and
21 then as I said, I think I'm pretty much close to being
22 finished.

23 What we're looking at here is a technology
24 comparison, and you see that the first one is a
25 Saf-T-Med syringe. That's been identified as a

1 Saf-T-Med syringe.

2 The second one is the -- out of the McGary
3 patent, Figure No. 11.

4 And the third one is the Integra 3mL.

5 Can you see all of those, Mr. Shaw?

6 A. Yes, sir.

7 Q. All three of these have a cutter, do they not?

8 A. Yes, sir.

9 MR. BECK: Let's bring up B061.

10 Q. (By Mr. Beck) This is the Saf-T-Med syringe;
11 this is the McGary Figure 10 and the Integra 3mL.

12 MR. HARDIN: No. 1 applies here, Your
13 Honor.

14 MR. BECK: Just have a sign, Judge, that
15 says No. 1.

16 THE COURT: I'm not going to re-read
17 No. 1. And we'll try to have copies of these that have
18 been given to you for your notebooks tomorrow.

19 MR. BECK: Thank you, Your Honor.

20 THE COURT: Limiting Instruction No. 1
21 applies to this line of questions.

22 Q. (By Mr. Beck) Each one of these has a
23 detachable needle, the Saf-T-Med syringe, the McGary,
24 Figure 10 in his patent, and the Integra 3mL; is that
25 not correct?

1 A. Yes, sir.

2 MR. BECK: Let's bring up B062.

3 Q. (By Mr. Beck) This is the technology
4 comparison, the needle assembly. On the left is the
5 Saf-T-Med syringe; on the right is the Integra 3mL.
6 Both have a four-part needle assembly, do they not?
7 One, two, three, four. One, two, three, four.

8 A. I'm looking at four parts up there.

9 Q. All right.

10 MR. BECK: Let's look at the B063,
11 please.

12 Q. (By Mr. Beck) And this is technology
13 comparison core pin support holes. Saf-T-Med syringe on
14 the left; Integra 3mL on the left -- on the right,
15 rather.

16 Both of these have core pin support holes, do
17 they not?

18 A. They have holes.

19 Q. All right. You're not going to say core
20 pinholes; you just say they're holes?

21 A. I didn't see them molded. I'll take -- I
22 mean, if that's what they are, that's what they are.

23 Q. Okay.

24 MR. BECK: Let's look at B050, please.

25 Q. (By Mr. Beck) Now, this is Figure 8 that you

1 told the jury about in your '733 patent, is it not?

2 A. Yes, sir.

3 Q. And this is the retainer member here

4 (indicates), correct?

5 A. Yes, sir.

6 Q. This is the bridging portion (indicates), is
7 it not?

8 A. That's one -- yeah. In that drawing, it is.

9 Q. All right. And the retainer member -- well,
10 first of all, the retainer member has friction between
11 the barrel wall and the retainer member, does it not?

12 A. Yes, sir.

13 Q. And is it not also true that during
14 retraction, the retainer member moves or is pushed
15 forward?

16 A. I don't know that.

17 Q. You don't know one way or the other?

18 A. Well, I have the option. I can either move it
19 forward, or I can have something break the bridging
20 member. There is -- there isn't anything in that
21 drawing that tells you that it has to move forward. It
22 could be either way. It's not restricted.

23 Q. In the product, does it move forward?

24 A. In your product?

25 Q. In the VanishPoint system.

1 A. It does not.

2 Q. All right.

3 A. In my product, we don't use the bridging
4 portion.

5 Q. At all?

6 A. No, sir.

7 Q. Okay. Now, you mentioned to the ladies and
8 gentlemen of the jury that during the 1990s, you
9 submitted your technology to Becton Dickinson, correct?

10 A. In the early 1990s?

11 Q. Yes, sir.

12 A. Yes, sir.

13 Q. As a matter of fact, so the jury might know,
14 you did it several times in the '90s, did you not?

15 A. Yes, sir.

16 Q. And Becton Dickinson eventually told you, not
17 once but not twice -- but twice that they thanked you
18 for your interest in trying to partner with Becton
19 Dickinson, but they respectfully declined, correct?

20 A. Yes, sir.

21 Q. And you also knew that Becton Dickinson was
22 not just looking at your technology but was looking at
23 the technology of a lot of other companies with respect
24 to a retractable syringe, right?

25 A. My knowledge about what Becton Dickinson was

1 looking at, outside of what we were doing, has got to be
2 really limited, sir.

3 Q. Well, you knew about Med-Design, and you knew
4 about Saf-T-Med, for example.

5 A. Yes, sir.

6 Q. You knew about that.

7 And you are aware, are you not -- and by the
8 way, you were trying to partner up with other companies,
9 too, not just Becton Dickinson, right?

10 A. In the early '90s, yes, sir.

11 Q. And Sherwood, for example, is a company that
12 you tried to partner up with?

13 A. Yes, sir.

14 Q. And they respectfully declined after thanking
15 you; is that right?

16 A. You know, I'd have to go back and review the
17 exact details of that.

18 Q. All right. You told the jury about the
19 plunger of the Integra 3mL and how it's inaccessible for
20 grasping, and you remember being shown that at your
21 deposition and being asked to see if you could pull out
22 the thumb cap.

23 Do you remember that?

24 A. Yes, sir.

25 MR. BECK: Could we play that, please?

1 Q. (By Mr. Beck) That's technically not in
2 evidence yet.

3 (Video playing.)

4 QUESTION: You ready? Can you pull the
5 plunger out and show me the tip of the plunger, what it
6 looks like?

7 ANSWER: Hmmm.

8 (End of video clip.)

9 Q. (By Mr. Beck) You were actually able to get it
10 out, were you not?

11 A. Yes, sir.

12 Q. And you had actually gotten it out more than
13 once, didn't you?

14 (Video playing.)

15 QUESTION: Pull it out and show me what
16 the tip of the plunger looks like.

17 (End of video clip.)

18 A. I believe I was only given one product, is my
19 memory of it.

20 Q. (By Mr. Beck) The Integra 3mL?

21 A. That was the Saf-T-Med, was it not? I mean,
22 I'm not sure which film or what deposition or what I'm
23 looking at out of context. It was -- if you would let
24 it go -- maybe we could see what that was.

25 Q. Whichever one it is, you were able to pull the

1 cap out of it.

2 A. Yes, sir.

3 Q. It's not inaccessible for grasping, is it?

4 A. Yes, sir, it is inaccessible for grasping.

5 It -- but that doesn't say that somebody couldn't pry it
6 out.

7 Q. Okay. Now, you talked about briefly -- I want
8 to mention briefly about the Murray patent.

9 The Murray patent disclosed vents, did it not?

10 A. Yes, sir.

11 Q. And Claim 10 in the '077 patent uses the term
12 nearly fully depressed. Am I right on that?

13 A. That's my memory of it.

14 Q. And you testified under oath in your
15 deposition that that language is not particularly
16 helpful in a technical discussion, correct? It's a
17 little bit vague?

18 A. I think there was more testimony about that.
19 I said I preferred a two-position handle, but I believe
20 later in the testimony, I also clarified that I thought
21 the fully depressed position was when you got down there
22 to where the plunger head was down near the front, and
23 the more -- the further you went, the more fully
24 depressed it was. And so rather than be a specific
25 point as it approached, it became more fully depressed.

1 And for an engineer, my comfort for -- I was
2 asked what specific position it was at. I think anybody
3 would understand what fully depressed means. But if I'm
4 asked at what point is it, then the stop of the
5 two-position handle would allow me to measure that
6 location.

7 MR. BECK: Let's bring up Page 35,
8 Line 19 through Line 24.

9 MR. HARDIN: Which one?

10 MR. BECK: It's the same one, January
11 12th, 2009.

12 MR. HARDIN: Thank you.

13 Q. (By Mr. Beck) The question was -- can you see
14 that, Mr. Shaw?

15 A. Yes, sir.

16 Q. It says, Question: Do you think it's unclear
17 what exactly nearly fully depressed refers to?
18 And your answer was: I think nearly is not very helpful
19 in a technical discussion. Maybe that's because of my
20 background in engineering, but what does nearly mean?

21 And then you talk about in the case of a car
22 accident.

23 Do you remember testifying to that?

24 A. I'm -- I'm reading it with you.

25 Q. All right. And you're not denying that you

1 testified to that, are you?

2 A. I -- I'm saying I believe there was more
3 testimony about that, and I'd have to go through the
4 deposition to show you, and I'm saying that I do think
5 that even a layperson would be able to understand, from
6 looking at the drawings, what's necessary to make the
7 product.

8 MR. BECK: Let's bring up Page 50,
9 Line 11 through Line 13.

10 Same deposition, Mr. Hardin.

11 Q. (By Mr. Beck) I had asked you earlier about
12 whether the best description of what you invented are
13 the claims in the patent, and let me remind you what you
14 testified to under oath earlier this year.

15 At the top there, this is your testimony. Can
16 you see that, Mr. Shaw?

17 A. Okay.

18 Q. I think the best description of what I
19 invented are the claims in the patent, and I also think
20 that is what we're entitled to.

21 That is a true statement, is it not?

22 A. As long as the claims in the patent are
23 clarified either by the Honorable Judge, through a court
24 ruling, or when there's doubt, by the descriptions that
25 are in the patent.

1 The whole patent relates to the claims, is my
2 understanding. But, again, I'm -- I'm not a lawyer.
3 And after this week, I'm not sure I would want to be.

4 Q. Well, I guarantee you, I don't want to be a
5 lawyer either, but I've got to be. It's too late now
6 for me to change.

7 So the best description of what you invented
8 are the claims in the patent. That's the starting
9 point, is it not?

10 A. Starting point, yes, sir.

11 Q. Okay. Now, a couple of matters I want to
12 clarify.

13 There was testimony earlier about how your
14 main manufacturing facility is in Little Elm, Texas.

15 One of these documents you filed with the SEC,
16 you tell them where your manufacturing facilities are,
17 do you not?

18 A. Yes, sir.

19 Q. And in your 10K, for the year ending in 2008,
20 you told them that almost three-fourths of your
21 manufacturing capacity was in China, not Little Elm,
22 Texas, correct?

23 A. We have no facility in China. What happened
24 is, we were unable to raise funds in the United States,
25 and the Chinese company put up money for tooling and

1 capacity, and they own that facility. Our entire
2 facility of what we own is in Little Elm, Texas.

3 Q. It says -- there's a company named Double
4 Dove, which is a Chinese manufacturer, correct?

5 A. Yes, sir.

6 Q. And they manufactured, as of the end of 2008,
7 approximately 74 percent of the units that you produced,
8 correct?

9 A. Yes, sir.

10 Q. That's as of just the end of last year,
11 correct?

12 A. Yes, sir.

13 Q. Now, I want to talk a little bit about your --
14 before we leave it, I've got two more subjects, and then
15 I'm finished.

16 The legislation that you say that you
17 spearheaded, what did that legislation do? Did it
18 mandate that people had to use these safety devices?

19 A. Well, I think -- when you say I spearheaded, I
20 think what -- if you mean our company worked with other
21 people, it was a team effort. I don't -- I don't
22 believe -- if I represented that we spearheaded that
23 legislation, I certainly misrepresented the facts.

24 Q. Okay. There were a lot of people that did
25 that, right? A lot of people involved in that effort?

1 A. Yes, sir.

2 Q. A lot of different companies involved in that
3 effort, right?

4 A. I'm not sure what -- how much work the other
5 companies did in that. My memory of -- my memory of it
6 tells me that there were healthcare workers. The
7 Service Employees International Union worked closely
8 with us, and they were mainly responsible for it. And I
9 believe early on, we were the only company that was
10 helping them.

11 Q. All right. And the result of that legislation
12 is what; that healthcare workers had to start using
13 safety devices?

14 A. The intent of that legislation, I'd rather
15 talk about, because it's got rules in it, penalties, and
16 things that happened that maybe haven't happened, and
17 so -- well, help me. Repeat your question.

18 Q. Yes, sir. My question is just very simple.
19 Just generally, is the -- is the purpose of the
20 legislation that was passed in California and elsewhere
21 to mandate or require people to start using these safety
22 devices?

23 A. Yes, sir.

24 Q. So that before the legislation, healthcare
25 workers necessarily didn't have to do that, but after

1 the legislation passed, then they would have to use
2 safety devices, correct?

3 A. If they complied with the law.

4 Q. Right. Which would mean retractable syringes,
5 correct?

6 A. Currently, I believe the effective technology
7 that reduces the accidental sticks is the automated
8 retraction syringes.

9 That doesn't mean something else might appear
10 tomorrow that's different than that, but for right now,
11 as far as I know, only automated retraction is limiting
12 the sticks, and so I think you probably can conclude
13 that.

14 Q. All right. Now, with respect to your -- what
15 you have benefited from the sale of the VanishPoint, you
16 told the ladies and gentlemen of the jury that you have
17 a royalty on gross sales, correct?

18 A. Yes, sir.

19 Q. And it started out at 5 percent, and it
20 eventually went up to 7 percent.

21 A. I believe I said that it was 5 percent of
22 gross in my licensing agreement, but after we paid the
23 rebates and what was necessary for the distribution fees
24 we were having to pay, it turned out 5 percent of gross
25 was 7 percent of the net of what the company received.

1 Q. Okay. You received an initial fee of 500,000,
2 right?

3 A. Yes, sir.

4 Q. And the royalty that you negotiated, you
5 really negotiated that with yourself, did you not?

6 A. Yes, sir.

7 Q. And under your license agreement with RTI, you
8 will receive one-half of any monetary award this jury
9 may decide to give in this case, correct?

10 A. Yes, sir.

11 Q. And with respect to the royalty, the 5-percent
12 royalty, or whatever the royalty is on gross sales,
13 you-all have sold, as I understand what you've reported,
14 over \$200 million in sales; is that correct?

15 A. I live by units, because I think in terms of
16 how many nurses, but if you've got a document there,
17 I'll be glad to validate it. If we produced it, I'll
18 stand behind it.

19 Q. How many units would you approximate for the
20 jury have been sold of the VanishPoint?

21 A. Last week when I checked, I believe we
22 estimated 680 million units.

23 Q. All right. And what is the price of that?

24 A. It's all over the place. Some of it sold in
25 the United States --

1 Q. Give the jury some range.

2 A. Well, it's different, whether it's sold in the
3 United States or sold outside of the United States.

4 Q. Well, let's just talk about the United States.
5 Give the jury some estimate of the price range from
6 sales of VanishPoint in the United States, so the jury
7 can calculate what we're talking about here.

8 A. They're not going to get there, because then I
9 need to know the number of units I sold in the United
10 States, and I just gave you the units that we sold
11 total. And so I'm not going to be able to help you get
12 to the number that way.

13 Q. Mr. Shaw, have you, in fact, made millions?

14 A. Yes, sir.

15 Q. No question about that, is there?

16 A. No question about that.

17 Q. And you've talked to the ladies and gentlemen
18 of the jury about this BVS valuation, Business
19 Evaluation Services, correct?

20 A. Yes, sir.

21 Q. Now, the -- your licensing agreement is what
22 is called a running royalty, is it not, not a lump-sum
23 royalty?

24 A. That's correct.

25 Q. It continues?

1 A. Yes, sir.

2 Q. And this valuation in this Business Valuation
3 Service document that you talked about on your direct is
4 based on a forecast of future revenues, is it not?

5 A. Yes, sir.

6 Q. And this very document says on Page 47, and I
7 quote: Persons reading this appraisal should understand
8 that the cash flows and valuations derived by our
9 analysis are speculative in nature and may not be
10 realized.

11 That's exactly what this says, does it not?

12 A. Yes, sir.

13 MR. BECK: That's all I have, Your Honor.

14 THE COURT: Redirect.

15 MR. HARDIN: We have no questions for
16 this witness.

17 THE COURT: Very well. Mr. Shaw, you may
18 step down.

19 Gentlemen, why don't you approach.

20 (Bench conference.)

21 THE COURT: What are you expecting next?

22 MR. HARDIN: About a half hour to 35
23 minutes of video deposition of some of the Becton
24 Dickinson folks.

25 THE COURT: I was considering letting the

1 jury go home. I know yesterday at the break, please
2 tell the Judge we want to go home at 4:30. They might
3 be doing a little better today, but I'm just thinking --

4 MR. BECK: Well, obviously, Your Honor,
5 we will do whatever you want to do. If you've got 35
6 minutes, that will take us close to 5:00, but let them
7 go --

8 MR. HARDIN: You want to let them go,
9 that's up to the Court.

10 THE COURT: Well, we're going to have to
11 burn some time, so let's just go ahead.

12 Now, given any thought to the instruction
13 at the end of the day, you want any mention of the 60
14 Minutes?

15 MR. BECK: No.

16 THE COURT: Just my normal --

17 MR. BECK: Just your normal.

18 THE COURT: By the way, Mr. Keyzer, being
19 the diligent clerk he is, that issue came up during the
20 exhibits.

21 MR. BECK: That was when it came up.

22 THE COURT: Didn't allow the admission of
23 the 60 Minutes.

24 MR. HARDIN: That's correct.

25 THE COURT: I didn't know. That's why I

1 didn't know about it. Very well.

2 (Bench conference concluded.)

3 THE COURT: Ladies and Gentlemen, we have
4 about 35 minutes of deposition for you, and we'll go
5 home, or at least the jury will.

6 Are you up to 35 minutes of depositions?

7 If you don't, we're going to start
8 tomorrow watching them.

9 MR. BOWLES: Judge, we may watch them a
10 little bit tomorrow, too, because there's about total 50
11 minutes of counter-designations.

12 THE COURT: Why don't we split it in
13 half. Is it convenient to split it in half?

14 You know, I don't think we want to watch
15 all 50 minutes of it today. Or would we rather let the
16 jury go home and us work some?

17 Jury have any particular preference? Do
18 you want to --

19 JUROR: Go home.

20 THE COURT: Go home.

21 MR. BECK: We could --

22 MR. BOWLES: We support that, Your Honor.
23 So do I.

24 THE COURT: Realizing we will watch them
25 tomorrow, if we don't watch them today, so if you want

1 to go home -- it's been a long day. We have work to do.

2 And my staff and I appreciate being able
3 to leave a little early, also. So I'll let the jury go
4 home for the day with my normal instructions not to
5 investigate this in any fashion. No online in any
6 fashion. Everything I've told you previously about
7 investigating this case.

8 We'll try to start promptly at 9:00 a.m.

9 Thank you.

10 COURT SECURITY OFFICER: All rise for the
11 jury.

12 (Jury out.)

13 THE COURT: Have a seat.

14 Obviously, we're going to start with 50
15 minutes of depositions tomorrow.

16 What else might be expected?

17 MR. BOWLES: Your Honor, after that, we
18 would call Walter Bratic, our damage expert.

19 THE COURT: Damage expert, yeah.

20 MR. BOWLES: And then Mr. Kozy, adverse.

21 THE COURT: What's left -- what theories
22 are you going under by way of damages? Obviously, the
23 lump sum royalty?

24 MR. BOWLES: Lump-sum reasonable royalty.

25 THE COURT: Lump-sum reasonable royalty?

1 MR. BECK: Yes, sir.

2 MR. DAWSON: We're not agreeing it's
3 reasonable.

4 THE COURT: Anyway, your damage expert,
5 the adverse witness.

6 MR. BOWLES: Then we will rest.

7 MR. CARROLL: Read some stipulations.

8 MR. BOWLES: Read some stipulations.

9 You know, we're going to have to make an
10 order of proof at some point, Your Honor, before we
11 offer the proof -- before -- before we rest, so...

12 THE COURT: What is that on?

13 MR. BOWLES: Well, that will be on some
14 of the evidence that you've --

15 THE COURT: Excluded? You want to do it
16 right now?

17 MR. BOWLES: Are we ready?

18 MR. HARDIN: It's a written submission.

19 MR. BOWLES: It's a written submission,
20 Your Honor.

21 THE COURT: Is it ready to be --

22 MR. BOWLES: I don't think it is.

23 THE COURT: Just thought we would take
24 care of some housekeeping matters.

25 MR. BOWLES: I wish it were. I apologize

1 to the Court.

2 THE COURT: Well, we will do that during
3 a break or before we start tomorrow morning, whatever.

4 MR. BOWLES: All right, sir.

5 One other thing. One of the witnesses
6 we're going to be playing tomorrow has some sensitive
7 information that Mr. Dawson told me that they would like
8 people not involved in the lawsuit to --

9 THE COURT: That are not subject to the
10 protective order?

11 MR. BOWLES: That are not subject to the
12 protective order, Your Honor.

13 THE COURT: To leave the courtroom? You
14 need to let me know when that's going to take place, and
15 we'll ask them to step out for that time period, and
16 then we'll bring them back in.

17 MR. BOWLES: That will be great.

18 THE COURT: I mean, is it throughout the
19 deposition, or is it in a selected portion?

20 MR. BOWLES: No, sir. And it's only
21 seven minutes.

22 MR. DAWSON: I think it's the last
23 deposition. If we could just excuse them during the
24 entirety of the deposition, I think that would be
25 preferable.

1 MR. BOWLES: That's the shortest one,
2 that seven minutes.

3 THE COURT: That's fine.

4 MR. DAWSON: And, Your Honor, just so you
5 know, that same issue is probably going to come up
6 during Mr. Bratic or might come up during Mr. Bratic's
7 testimony. It's the same sensitive information.

8 THE COURT: We can do that.

9 MR. BOWLES: Thank you, Your Honor.

10 THE COURT: Anything else? Is it
11 reasonable to expect Plaintiff is going to finish your
12 case tomorrow?

13 MR. BOWLES: Oh, yes.

14 THE COURT: Well --

15 MR. BECK: They're using up all their
16 time.

17 MR. HARDIN: I was going to say by noon.

18 THE COURT: Four hours and 58, if you use
19 too much on direct, the cross-examination will be very
20 brief.

21 MR. BOWLES: What's our total right now?

22 COURTROOM CLERK: You have 4 hours and 59
23 minutes remaining.

24 THE COURT: How much time does BD -- do
25 you have remaining?

1 COURTROOM DEPUTY: 9 hours and 22
2 minutes.

3 THE COURT: Too much time.

4 I guess I'm trying to decide is there any
5 realistic expectation of us finishing the testimony
6 Friday?

7 MR. DAWSON: We've got 15 hours left;
8 you've got 3 days.

9 THE COURT: I'm trying to decide if
10 there's any reasonable expectation that we will charge
11 the jury Friday.

12 MR. BECK: I was actually -- that's what
13 I was hoping, but I'm not so sure we're going to make it
14 at this point.

15 THE COURT: Okay. We'll just see where
16 we are. We'll start probably the jury instruction
17 charge process, if not tomorrow afternoon, certainly
18 Thursday.

19 And my practice is give you a copy of the
20 charge and give you a chance to look over it overnight,
21 sort of an informal process where, hopefully, at the end
22 of the day, we may not have an agreed-upon product, but
23 we're close.

24 Is tomorrow reasonable? Probably
25 tomorrow afternoon. Give all your lawyers something to

1 do tomorrow night.

2 If there's nothing more, we'll try to be
3 here about 8:30.

4 COURT SECURITY OFFICER: All rise.

5 (Court adjourned.)
